Burpee's CELTUCE

*A New Vegetable
for 1942*

290 Because it combines the uses and flavors of both celery and lettuce, it is named Celtuce. Pkt. 15¢; $\frac{1}{4}$ oz. 35¢; $\frac{1}{2}$ oz. 65¢; oz. \$1.25.

Burpee's Celtuce stalks, peeled and sliced, are delicious served raw as a relish like celery or carrots.

Above: A plant of Burpee's Celtuce which is valuable chiefly for its stalks; they may be eaten as a raw vegetable or cooked. Remove the lower leaves, as shown in the center picture, and cut off all the outer skin before the stalks are used. A few recipes are given on the opposite page.

Left: Young Celtuce plants. At this stage or when smaller, the leaves may be used as lettuce or as boiling "greens."

Tempting Ways to Use Burpee's Celtuce

In 1938, from far-off Western China, near the border of Tibet, Reverend Carter D. Holton, a missionary, sent us a few seeds of a new vegetable and with them a letter that read in part: "I am sure you will find pleasure in the growing and in the taste of this new vegetable. It is widely used by the people living in this province. The young leaves are eaten as lettuce and the stalks are peeled of their tough outer skin and the heart eaten either raw or cooked. It is truly delicious, with a taste all its own, perhaps slightly suggesting that of celery but different and milder."

After having grown Celtuce for the last four years on both our Fordhook and Floradale Farms and eaten it prepared in many ways, we wholeheartedly agree as to its delicacy and flavor.

Burpee's Celtuce belongs to the lettuce family but is entirely different in its growth and uses. The young leaves may be eaten as a salad, but its chief value is its central stem or stalk.

Whether Celtuce stalks are to be eaten raw or cooked, you must first remove all the outer skin and fibrous layers down to where they become light green and tender. As a raw vegetable, cut the stalks into 4- or 5-inch lengths and split lengthwise; chill and eat as you would celery or carrots, with salt or mayonnaise.

Cooked Celtuce stalks are pale green, attractive in appearance, and have a pleasing, mild flavor suggestive of celery, lettuce, asparagus, broccoli, zucchini and summer squash. There are many ways to use Celtuce; below we give a few recipes which were originated and tested in the Country Gentleman kitchen by Mrs. Caroline King. Other ways to prepare Celtuce will suggest themselves; it has so many possibilities.

CELTUCE AU GRATIN WITH CHEESE

- 1 cup Celtuce cut in inch slices
- 1 cup light cream sauce
- Grated cheese
- Bread crumbs
- Salt and pepper

Remove leaves and outer layers of skin from the Celtuce, using only the tender light green interior. Cut into inch slices and boil in a small amount of water. Put into baking dish, cover with sauce, season to taste. Sprinkle top with bread crumbs and cheese and brown under broiler.

CELTUCE VINAIGRETTE

Wash and peel Celtuce stalks. Cut into strips about 4 inches long and cook in salted water until tender. Chill and serve with vinaigrette dressing, which is made as follows:

- 1 teaspoon salt
- 1/4 teaspoon pepper
- Dash of cayenne pepper
- 2 tablespoons vinegar
- 6 tablespoons salad oil
- 1 teaspoon minced gherkins
- 1 teaspoon minced capers
- 1/2 teaspoon minced parsley
- 3/4 teaspoon minced shallot
- 1 teaspoon prepared mustard

Mix salt, pepper, vinegar and oil and beat well. Then add the other ingredients as listed above.

GREEN SALAD

- 2 cups young Celtuce leaves and stems
- 1 pimiento, canned
- 1/2 onion, chopped
- French dressing and Tarra-gon vinegar to taste
- 2 tablespoons cucumber relish

Cut leaves into smaller pieces and slice stalks of Celtuce thinly. Toss all ingredients together and serve. For variety, add grated Roquefort cheese to dressing.

290 Burpee's Celtuce is easy to grow in the home garden and is well adapted for market and shipping. Plants grow quickly, forming a rosette of light green leaves which may be used, when young, as "greens." In less than 90 days after seed is sown, the central stem or stalk is usable and will be found most tender at this age. The stalks are solid throughout, the skin greenish white and tough but the inside is very succulent, most delicate pale green, crisp and brittle. Make first sowing of seed as soon as ground can be worked in the spring. Succession sowings at intervals of a week or ten days will give a continuous supply. Grow Celtuce—it is new, it is good, it is interesting and it is healthful; the best new vegetable for 1942. Pkt. 15¢; 1/4 oz. 35¢; 1/2 oz. 65¢; oz. \$1.25.

New BURPEE'S YELLOW COSMOS

*Silver Medal Winner
All-America Selections for 1942*

1943 Burpee's Yellow Cosmos or Yellow Flare is the first and only yellow cosmos in cultivation; the companion to Orange Flare and like it in earliness, plant habit and ease of culture. The color, however, is different—bright yellow, fresh and clear, with faint, almost unnoticeable darker golden shadings. Flowers are single, $2\frac{1}{2}$ in. across, with jagged or pointed ray tips, which are somewhat incurved.

Plants are bushy and vigorous in growth, 3 ft. and more tall, depending on location; flowering is extremely free, beginning when plants are small and continuing and improving with the development of the plant until checked by frost. Showy in the garden or for home decoration. Grows anywhere, and its early flowering is of particular value in sections having short summers.

Pkt. 25¢; $\frac{1}{8}$ oz. 60¢; $\frac{1}{4}$ oz. \$1.00.

New Zinnias BURPEE'S SUPER GIANTS

3175 Burpee's Super Giants are the largest of all Zinnias and contain the loveliest colors and combinations of colors ever seen in this flower. Rare and unusual shades of cream, buff, apricot, salmon, rose and orange predominate, with a few yellows and whites; scarlet and crimson are not prominent, though there are some very attractive flowers in these colors. One is impressed at the many two-tone and three-tone color effects seen in some of the blooms.

Flowers are truly giant, $5\frac{1}{2}$ to $6\frac{1}{2}$ in. across and of a wide diversity of flower form; some like Dahlia Flowered, others like Giants of California and still others with curled and twisted chrysanthemum-like flower heads. Striking in the garden; invaluable for cutting. 3 ft. tall. *See color illustration on back cover.*

30 seeds 10¢; 100 seeds 25¢;
225 seeds 50¢; 500 seeds \$1.00.

Dear Fellow Gardeners:

Many years ago my father started this business. That was in 1876, the Centennial Year of American Independence.

Father was only 18 years of age, and already had studied medicine for two years at the University of Pennsylvania. He had never wanted to study medicine but did so because his father and grandfather were famous doctors and surgeons in Philadelphia. Father could not bear to see people suffer—he loved to see things grow.

At the age of 18 he gave up his study of medicine and started in the seed business on Church Street, facing Old Christ Church in Philadelphia.

For the first three years it was hard sledding. Then gardeners everywhere began to realize that here was a man who was trying to serve them. Millions of people came to know my father through his seed catalog. They seemed to sense that his first thought always was of others. They knew that Burpee's Seeds were as good as father was able to grow them.

One time, in writing of our business, father said: "A business that has no vision of the future, or the object of which is mere money making, would not be worthy a life's work."

This business is the result of my father's "life's work" and its growth is proof that he had a "vision of the future."

The seed business is done entirely on confidence. When you buy seeds you are buying a promise that cannot be fulfilled until harvest time.

The confidence you and millions of other gardeners have in Burpee is the greatest heritage I received from my father.

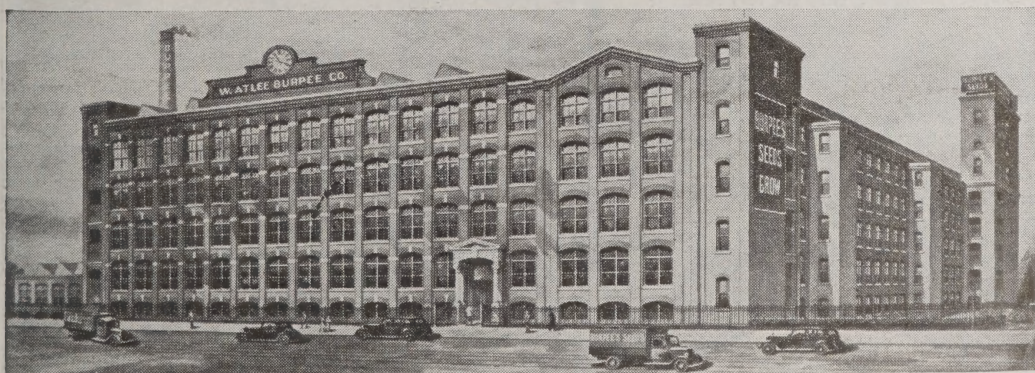

To serve you well is perhaps the greatest tribute I can pay to him.

Faithfully yours,

David Burpee

BURPEE GUARANTEE

We guarantee the vitality and purity of Burpee's Seeds and Bulbs to the full amount of the purchase price. You can have your money back any time within a year if you are not satisfied with the results. Even with the highest quality seeds and bulbs, success in gardening depends largely upon cultivation, soil, and weather conditions. Therefore, in no case shall W. Atlee Burpee Co. be liable for more than the amount actually paid us for seeds or bulbs. All goods are sold under this Burpee Guarantee. W. Atlee Burpee Co., Philadelphia.

Burpee's Fordhook Farms

FORDHOOK FARMS are the proving grounds for all seeds, bulbs and roots that we sell, as well as the breeding grounds for many varieties of vegetables and flowers.

Fordhook is the most famous seed experimental farm in America. When we introduce a variety under the name of Fordhook or as a special strain, we stake our reputation that it is all the name implies—"Burpee's Best." No expense is spared to insure your success by providing you with the Best Seeds that Grow for your own garden or farm.

Picking seed of the always popular Scarlet Sage, or Salvia. Many fields of the different varieties are grown each year at Fordhook.

Many acres are devoted to Pepper trials and seed breeding grounds at Fordhook to assure Burpee customers getting the very best.

Thousands of tests are made each year at our Fordhook Farms for purity and germination. Here is a view of the popular "green" vegetable, Fordhook Giant Swiss Chard.

Burpee's Floradale Farms

FLORADALE FARMS were established principally for the growing of Sweet Peas for seed but other flowers have done so well in the cool, fertile Lompoc Valley that we now grow a long list of varieties as well as many acres of vegetable. Here, too, a large acreage is devoted to trial, experimental and breeding grounds—most important for the improvement of existing varieties and the creation of new ones.

You can depend upon Burpee for the latest and best; they have been tested; satisfaction is guaranteed.

On Floradale Farms, we grow many acres of the different varieties of Carrots for seed. Here is a field of Burpee's Goldinhardt Carrot in flower.

In the cool, long-growing climate of the Lompoc Valley, Cauliflower grows to perfection and produces seeds the equal of those grown anywhere in the world. Above is a field of Burpeeana Cauliflower on Floradale Farms.

Visitors to Floradale Farms last summer were astounded at the size of Burpee's Super Giant Zinnias, their forms and marvelous colors. See color picture on back cover.

Burpee's Seeds Grow

and are The Best that Grow

Sixty-six years ago, the Burpee seed business started with the determination to provide seeds of known quality and seeds that would produce the best results. We have always endeavored to offer something new and different from existing varieties if it has merit.

Our business could not have grown to be the largest direct-by-mail Seed House in the world without the loyal support of our many friends and customers, some of whom have been with us since we started. Recently, David Burpee received a letter from one of his father's first customers. With Mrs. Richards' permission, we print it here:

"This year is 65 years since I purchased seeds from your Father. It was the Centennial year. I was ten years old. Every year for 65 years I have never missed a year but what I have eaten delicious vegetables grown from Burpee's Seeds. And every year for 65 years my eyes have gazed upon beautiful flowers grown from Burpee's seeds and bulbs. No words can tell how much I have appreciated their reliable quality. I have never had a failure. As I look back over the 65 years, I consider that it has been a wonderful privilege that I have been so fortunate as to obtain such high quality seeds and bulbs as you have produced all through these many years.

Yours truly,

Arapahoe, Nebraska

(signed) Mrs. J. E. W. Richards"

Thank you, Mrs. Richards, for this sincere, unsolicited testimonial. It has been a privilege and a pleasure to have served you these many years. Your faith, and that of our many other customers, in us is our most valued possession.

Reduce the High Cost of Living

Grow Your Own Vegetables and Flowers

Not only have food prices risen but in many markets the past fall there was a scarcity of fresh vegetables. Other countries have bought enormous quantities of canned vegetables, thereby depleting the supply here. Shortage of labor on farms and truck gardens has curtailed the planting of vegetables for the market. If you have a piece of ground, plant a garden in 1942; plant vegetables for food and flowers for beauty.

This catalog offers a long list of varieties, the good old standbys and the new varieties that have merit. **Burpee's Celtuce is the most sensational new vegetable for 1942.** It is shown in color on the inside front cover with description and recipes on page 1. Some of our friends have already sampled Celtuce and here is what they think of it:

"**Celtuce** is certainly a most unusual vegetable. I served it in various ways to different persons and everyone found it delicious and commented on its illusive flavor which makes you want more."

"**Celtuce**, when cooked, has a pleasing, mild flavor. It doesn't taste quite like any other vegetable, though the ones with which people associated a similarity were celery, asparagus, broccoli, zucchini and summer squash. We predict it will become a popular vegetable."

"**Celtuce** was enjoyed as a cooked vegetable, cooked and chilled in salad, raw in salad and when eaten as celery."

"**Celtuce** stalks were cut into 5 to 6 in. lengths, sliced lengthwise, dipped in savory bread crumbs and turned to a golden brown in deep oil. This was pretty special and overtook eggplant done in a similar manner, which has always been a favorite."

"**Celtuce** was served both raw and cooked to several of our Institute Tasting Staff and their comments were certainly most enthusiastic. The vegetable has such a delicate yet individual flavor."

"**Celtuce** was enjoyed plain boiled, served hot with butter and lemon sauce in the manner of broccoli, also combined with young scallions and tiny fig tomatoes as a red-white-and-green accompaniment to spaghetti."

"**Celtuce**, cut in long, narrow strips and served raw, is delightfully attractive in appearance and had a very nice crispness and was cool as well as crisp as we bit into it. Cooked Celtuce had a flavor that was most subtle."

"**Celtuce** was enjoyed both as a crisp appetizer and a cooked vegetable. I feel sure it will be a popular vegetable."

"**Celtuce** was very appetizing and a welcomed change from the vegetables we have had on our table lately."

"**Celtuce** was given to my four-year-old child and she devoured it like she would an ice cream cone."

"**Celtuce** is a new taste thrill; I am sure it will gain instant popularity."

Braised Celtuce, Cream of Celtuce Soup, young Celtuce leaves with bacon dressing, are just a few other ways that Celtuce may be used. Be sure to grow it in 1942.

Burpee's Popular Garden Collections

It is surprising the quantity of vegetables that can be raised on even a small plot of ground. Living costs are rising, which alone should be sufficient reason for the greater production of home-grown vegetables. Then, too, the vegetables you grow will have much better flavor than those you buy. The estimated value of home gardens in the United States exceeds the value of all fresh vegetables (except potatoes) grown for market. Home vegetable gardening is a big business, and a very interesting and healthful one for all to enjoy.

For your convenience, we offer three assortments of Burpee's Best vegetable seeds to accommodate three different sized gardens. They were especially made up for those who want to have a vegetable garden but are in doubt as to which individual varieties to select. Buy the collection that best fits the size of space you have available. All seeds are of the Highest Quality and the collections are sold at much less than regular prices if varieties were bought separately. All are sent postpaid.

Burpee's Annual Flower Seeds

Annual flowers are those which live only one year. They grow, bloom, seed and die in one season. They are attractive in the garden—some for bedding, some for borders, some for rock gardens and others for climbing. Many are invaluable for cutting. Some are grown only for their foliage effect. All are lovely. With proper selection, blooms can be had from early summer until frost.

To make selection easy for you, we have indicated the principal purpose of different flowers with these marks:
C Fine for cutting; **D** Succeeds in dry or sandy soil;
M Prefers moist soil; **R** Suitable for rock gardens;
S Succeeds in or prefers semi-shade; **§** Climbing plants.

Burpee's New Calendulas *The X-Ray Twins*

So named, because the origin of both occurred on the same day in 1933 and under the same X-Ray treatment, yet in appearance each is distinct and entirely unlike twins. Reselections were carried on for six years; stock seed was grown in 1940 and crop for seed in 1941 so that you may have these distinct and lovely Calendulas in your garden this year.

1686 GLOWING GOLD As its name implies, its color is a vivid, glowing gold, difficult to describe, coming between golden and orange; a uniform self that is permanent and does not lighten or fade. Flowers are fully double, extra large, 4 in. across, with loose and fluffy petals that give the appearance of a fluffy golden ball. Long, heavy, yet wiry stems. 2½ ft. tall.

Pkt. 25¢; ⅓ oz. 60¢; ¼ oz. \$1.00.

1687 ORANGE FLUFFY New in color and form. The general color of the flowers is a bright mid-orange, intensified by a prominent jet-black eye. Flowers are large, 3½ in. across, semi-double, with the petals becoming increasingly shorter and more erect towards the center. Plants grow 2 ft. tall and bear profusely their showy flowers on long, strong stems.

1977 Snow Bird

Good white flowers have become extremely popular among gardeners in the past few years so that our new variety of the well-known *Cynoglossum* or Chinese Forget-me-not should be of value for garden use and cutting purposes. The habit of the plants and form of the flowers is the same as that of Blue Bird, but the color of the flowers is pure snowy white. 2½ ft. tall.

BURPEE'S AFRICAN MARIGOLDS

A wealth of color in late summer and fall unequalled by any other flower. Easy to grow in ordinary garden loam and a sunny location. Remarkable diversity of habit and size of flowers; each class has its own particular place in the garden. Lovely for cutting, the flowers keeping in fine condition for a long time.

Marigold, Burpee Gold Improved Pkt. 15¢.

2193 Tetra This is the first new marigold developed by W. Atlee Burpee Co., from stock treated with colchicine at the New York State Agricultural Experiment Station, Geneva, N. Y. Tetra is the result of the doubling of the chromosomes of the popular Guinea Gold Marigold. Since a plant in which the chromosome number is doubled is technically known as a tetraploid, we have named this new marigold "Tetra." It is as easy to grow as any marigold.

Flowers have the same attractive carnation flowered form as Guinea Gold, but are much larger, $3\frac{1}{2}$ to 4 in. across, and of a very deep orange color. Showy in beds and borders. Last well when cut. 2 to $2\frac{1}{2}$ ft. tall. Start seed indoors for earliest blooms.

Pkt. 15¢; $\frac{1}{8}$ oz. 50¢; $\frac{1}{4}$ oz. 85¢.

Sunset Giant Marigolds

2298 Finest Mixed A large percentage of the plants will produce the largest marigolds ever grown; 5 in. and more across. Flowers vary not only in size, but in formation as well as color; they are of many shades of orange and yellow, with orange predominating. Plants grow $3\frac{1}{2}$ ft. and more tall; begin to bloom in midsummer and continue without interruption until frost. Pkt. 15¢; $\frac{1}{8}$ oz. 35¢; $\frac{1}{4}$ oz. 60¢.

Cactus or Quilled Marigold

2269 Mrs. Lippincott Rich, creamy yellow flowers, $2\frac{1}{2}$ in. across, with petals that fold lengthwise and flare out broadly at the ends, giving a pretty frilled effect. Quite a departure in shape from all the marigolds that we list. Desirable for garden or cutting. Plants grow 3 ft. tall, are well branched and profuse blooming, beginning in midseason and continuing until late fall. Pkt. 10¢; $\frac{1}{8}$ oz. 35¢; $\frac{1}{4}$ oz. 60¢.

Carnation Flowered

2364 Oriole A new color in the carnation flowered group of marigolds with odorless foliage. Flowers are large, $3\frac{1}{2}$ in. across, bright golden yellow; the petal substance is of a very crisp texture, which gives a sparkle or brilliancy to the color. The plants grow $2\frac{1}{2}$ ft. tall, branch loosely and are very free flowering; lovely for garden and cutting. Companion to Burpee Gold and Canary Bird. Pkt. (100 seeds) 25¢; 225 seeds 50¢; 500 seeds \$1.00.

2294 Burpee Gold Improved Earlier, larger, dwarfier growing, with more flowers than Guinea Gold, and, above all, foliage is entirely free of the usual marigold odor. Glorious bright orange double blooms, $3\frac{1}{2}$ to 4 in. across, with the long petals loosely and artistically arranged. Plants grow $2\frac{1}{2}$ ft. tall, and bloom most freely from early summer until frost. Wonderful for cutting and garden decoration. Pkt. 15¢; $\frac{1}{8}$ oz. 35¢; $\frac{1}{4}$ oz. 60¢.

2203 Butter and Eggs The first bicolor African Marigold. Flowers are an attractive light butter-yellow, each petal delicately shaded deep golden yellow at the base and are 2 to $2\frac{3}{4}$ in. across. Plants grow 2 ft. tall, and have foliage that is entirely free of the usual marigold odor. Profuse. Pkt. 15¢; $\frac{1}{8}$ oz. 50¢; $\frac{1}{4}$ oz. 85¢.

2355 Canary Bird Large carnation-like flowers, 3 to $3\frac{1}{2}$ in. across, of a clear, bright canary-yellow. Plants grow about 2 ft. tall, are extremely vigorous and have foliage without odor. Highly prized for cutting and garden. Pkt. 15¢; $\frac{1}{8}$ oz. 50¢; $\frac{1}{4}$ oz. 85¢.

2295 Golden West It is earlier blooming, larger flowered, dwarfier growing, and more floriferous than Guinea Gold. Flowers are deep orange and grow $3\frac{1}{2}$ in. and more across, with petals loosely and gracefully placed. Plants grow $2\frac{1}{2}$ ft. tall. Much like Burpee Gold Improved except that Golden West has foliage with the usual marigold odor. Pkt. 15¢; $\frac{1}{8}$ oz. 35¢; $\frac{1}{4}$ oz. 60¢.

2277 Golden Crown Dwarf or Tom Thumb form of the popular Guinea Gold; plants grow about 10 in. high. Flowers are large, golden orange, and borne most abundantly. Especially suited for borders or bedding. Pkt. 15¢; $\frac{1}{8}$ oz. 35¢; $\frac{1}{4}$ oz. 60¢.

2180 Guinea Gold Brilliant orange carnation-like flowers flushed with gold. The first marigold of this type to be introduced. Foliage has usual odor. Pkt. 10¢; $\frac{1}{4}$ oz. 30¢; $\frac{1}{2}$ oz. 50¢.

Burpee's Famous Zinnias

The value of zinnias as garden and cut flowers cannot be stressed too highly. Their ease of culture, long blooming season, together with their wide range of color and varied flower forms, make them one of the most popular of all annual flowers. They are one of our leading specialties. Zinnias are heavy feeders, and while they will grow in poor soil and under unfavorable conditions, they must have rich, well-fertilized soil and be watered freely during periods of dry weather if the finest flowers are wanted. Plant in full

sun; they will not do well in the shade or near trees. Zinnias are hot weather flowers, coming into their full beauty in mid-summer and continuing until fall. Flowers last for days when cut; different size flowers and colors for every purpose. After the soil has become thoroughly warm, sow seed in the open ground where plants are to bloom. Thin out large flowered varieties to stand 2 ft. apart; smaller flowered types, 1 ft. Zinnias will bloom in about two months. All the different classes of zinnias are easy to grow.

Giant Dahlia Flowered Zinnias

These Giants among the Zinnias are outstanding both for the exquisite form of their gorgeous, long-stemmed flowers, which greatly resemble Giant Dahlias, and for the marvelous pastel shades included in their range of color. Bright and showy in the garden; wonderful for cutting, as flowers last a long time.

Burpee's Giant Mammoth Zinnias

Giant Mammoth Zinnia, Crimson Pkt. 10¢.

Large, round, well-shaped flowers composed of masses of broad, smooth petals which overlap in true shingle-like manner. The blooms, which are produced on sturdy branching plants, 2½ to 3 ft. tall, are long-stemmed, making them valuable for cutting. The flowers grow 4 to 5 in. across and 2½ in. or more in depth. The colors found in this type are exquisite and brilliant. They are in favor with those who prefer a smaller flower than Giants of California or Giant Dahlia-flowered, of which these were the forerunners. Very free blooming.

2813 Giant Mammoth, Mixed Colors A well-balanced and complete mixture of all best colors; sure to make a gorgeous showing in the garden and yield plenty of flowers for cutting throughout the summer and fall.

Giants of California Zinnias

Immense double flowers, 5 to 6 in. across, of a distinctive shape that is most graceful and desirable. The overlapping petals are more loosely placed than in the Dahlia-flowered type of zinnia, and the flowers themselves are more flattened, being only about 1 in. in depth. The vigorous, well-branched plants grow about 3 ft. tall and produce many long, strong flower stems. Ideal for cutting; attractive in beds and borders. Good keeping qualities.

3187 Orange King Rich cadmium or orange-scarlet flowers of remarkable brilliance; many of the large flowers are two-toned.

A few branching plants can be expected. All colors in mixture. **Pkt. 15¢; 1/8 oz. 35¢; 1/4 oz. 55¢.**

Dwarf Bedding Zinnias

Flowers grow about 2 1/2 in. across, and are produced so profusely that, regardless of how many you cut, there always seem to be more. A bed or border of these large flowers on dwarf plants, about 15 to 18 in. tall, is most attractive; they are nice too for cutting.

David Burpee Zinnia 90 seeds 10¢.

2878 David Burpee Zinnias

The flowers are of a form never before seen in zinnias; they may be likened to a large-flowered chrysanthemum, so attractively curled and quilled are the petals. They will grow up to 6 in. across and are rather deep, with cutting stems averaging 18 in. in length. The unique form of the flowers makes them exceptionally good keepers.

Another outstanding feature of these zinnias is the unusual range of colors, many that have never before been seen in zinnias. Pastel shades predominate, with tones of apricot, soft cream, chamois, buff, terra-cotta, burnt orange, soft rose, and peach. Some flowers are of solid colors while others are delightful combinations of two and three colors. Foliage is distinct; the leaves are long and narrow, curiously curled and twisted, unlike any other zinnia. Most desirable for garden use and unsurpassed for cutting. Plants grow 3 ft. tall. **90 seeds 10¢; 350 seeds 25¢; 1/4 oz. 50¢; 1/2 oz. 95¢; oz. \$1.75.**

BURPEE'S NASTURTIIUMS

Ever popular plants of the easiest culture, blooming most profusely in ordinary, well-drained garden soil. A soil that is overly rich will cause plants to produce more leaves than flowers. Nasturtiums may be had in a great variety of shades and color combinations, single or double flowers and tall or dwarf growing. Their varied and brilliant colors, different shapes and refreshing fragrance, make them most desirable for cutting.

Burpee's Dwarf Double Nasturtiums

Dwarf Double Nasturtium, Orange Glory Pkt. 15¢.

Plants are of compact, bush or globular form, about 1 ft. high and 1½ ft. across. The gorgeous, giant double and semi-double sweet-scented flowers are produced most freely on very long stems; they are fine for cutting. The irregularly placed petals give the blooms an unusually artistic appearance. The dwarf, rounded plants are most attractive for beds, edgings, rock gardens and pot culture. Make a glorious showing.

2338 Cherry Rose New color in Dwarf Double Nasturtiums—an exquisite shade of soft cherry-rose. Flowers grow 2½ to 3 in. across and are produced earlier and more profusely than any other variety.

Pkt. 15¢; oz. 45¢; 4 ozs. \$1.25.

2306 Delightful Soft salmon-cerise, the upper petals prettily marked crimson-maroon at the base, and as flowers age, they often take on a deeper shade of salmon-cerise than the lower petals. Exceedingly long stems.

Pkt. 15¢; oz. 35¢; 4 ozs. \$1.00.

2336 Garnet Gem Striking color—deep, rich, very bright garnet-red with just enough orange to enliven it with an iridescent glow. Flowers are double or semi-double, with 8 to 10 petals, and grow 2½ in. across.

Pkt. 15¢; oz. 45¢; 4 ozs. \$1.25.

2346 Mahogany Gem The darkest colored nasturtium we have ever seen; the velvety, brilliant flowers are rich, deep mahogany. Very large.

Pkt. 15¢; oz. 35¢; 4 ozs. \$1.00.

2305 Orange Glory The large, sweet-scented flowers are bright orange; the base of each of the upper petals and most of the inside of the throat are painted with deep garnet-brown. Narrow lines of this latter color radiate like a fan out over the upper petals, but disappear in an overlay of orange-chrome. Petals are wonderfully fluted and crinkled. Plants are of the true dwarf or bush form.

Pkt. 15¢; oz. 35¢; 4 ozs. \$1.00.

2348 Primrose Gem The dwarf, compact plants are literally covered with giant double, sweet-scented, soft primrose colored flowers.

Old-Fashioned Five-petaled Single Nasturtium

Burpee's Miracle Nasturtium Mixture

2334 Double and Super-Double Mixed These Hybrids were created by a combination of mutations and cross-pollinations between Burpee's Super-Double and Burpee's Double Hybrid Nasturtiums. Seed of this wonderful mixture will produce various types of flowers; some will be semi-double, like Golden Gleam, with 8 to 10 petals; others will be Super-Double, with as many as 40 to 60 true petals, like the illustration opposite. Plants are strong growing and produce an abundance of large, long-stemmed, sweet-scented flowers, 3 in. across.

Extreme doubleness and unusually large size of the flowers constitute two of the most important characteristics of Burpee's Super-Double Nasturtiums (*Tropaeolum majus Burpeeii*); when fully open, they resemble greenhouse carnations. Stems of the Super-Doubles are thicker and the plants sturdier and more vigorous than other nasturtiums. All plants will be of the tall Gleam type; adapted for beds, wide borders, ground cover, or trained upon strings or wire. They may, however, be cut back if a dwarf effect is desired.

Burpee's Super-Double is the only **Nasturtium** to be given a **Plant Patent**. Plants grown from our Miracle Mixture seed are protected by **U. S. Plant Patent No. 141**. Seeds are sold under such conditions.

Packet of 10 seeds for \$1.00; 3 packets for \$2.50.

Burpee's Tall Double Nasturtiums (Gleam Type)

Few flowers ever introduced have been acclaimed so quickly and praised so highly as double nasturtiums. The popular Golden Gleam was the first, and now we have varieties that represent all the best colors to be had in nasturtiums. Flowers are large, exquisitely sweet scented, double and semi-double; plants are semi-tall, of strong, vigorous growth and splendid for beds, broad borders or may be used as ground covers. May be trained upon strings or wire. Valuable for cutting, as flowers keep for a long time.

BURPEE'S ASTERS

A continuous display of asters from early summer until frost can be had by planting early, midseason, and late varieties. If you plant some very early varieties, we suggest that you have seedlings of later flowering ones or other flowers coming along to take the place of the earlies when they are through blooming.

* Varieties marked with an asterisk (*) are the Wilt-Resistant Strain. They are highly immune to "Wilt disease" or "Stem-rot."

Asters are easy to grow. They prefer rich, well-drained soil, plenty of sunshine, and ample moisture. They begin to bloom in 14 weeks to four months after seed is sown, varying according to type and climate. For earliest blooms sow seed indoors in boxes or pans six weeks before your usual outdoor planting time.

Violet Glory—earliest of all Asters Pkt. 15¢.

3087 Violet Glory

EARLIEST OF ALL ASTERS

To those who love the delicacy and richness of Asters, this extremely early flowering variety, Violet Glory, will be a joy. Blooms in 14 weeks from the time seed is sown; in flower before other Asters begin to bud. It is a beautiful double flower, 3 to 3½ in. across, deep purple-violet, with the center incurving petals displaying a handsome silvery sheen. The plant is not very leafy, seeming to give all its strength to the flowers, which are freely borne on stems 12 to 15 in. long. Plants are of open, spreading habit, 1½ ft. tall and about 2 ft. across. Extreme earliness and good cutting stems make Violet Glory a most welcome, new type Aster for the home gardener and florist. BURPEE'S PETUNIAS

Petunias are among the most satisfactory annuals for garden display. They succeed in ordinary, well-drained garden loam such as will grow a good crop of vegetables, and in a location where they receive plenty of sunlight. Do not plant in the shade nor in soil that is overly rich. We offer an extra select assortment of varieties.

Some types are especially suited for bedding and pot culture, others are ideal for edgings and mass plantings, while others are unexcelled for trailing from porch and window boxes; all are excellent for cutting.

Bedding Petunias (*Petunia hybrida*)

Plants are extremely free blooming, producing a wealth of flowers even under the most trying conditions of weather and soil. Ideal for large beds, borders and porch boxes. Seeds may be sown directly outdoors when soil has become warm or, for earliest blooms, seeds may be started indoors in pots or shallow boxes of fine soil. 1½ to 2 ft.

Burpee's Giant Ruffled Petunias

Petunia hybrida grandiflora superbissima

Burpee's Giant Ruffled Petunias are unsurpassed for bedding, borders, cutting, and most valuable for porch and window boxes as well as for pot culture. The flowers, with their large, wide-open throats, are deeply ruffled, artistically veined and, when well grown, often measure 5 to 7 in. across. They are ready sellers with those who grow pot-plants for sale; marketable flowering plants can be had in four months from the time of sowing the seed. Plants bloom throughout the summer until frost if planted in a sunny situation and given well-drained garden soil that is not overly rich. Do not give too much water.

Petunia seeds are quite small and most valuable. Sow them carefully indoors in pots or shallow boxes filled with equal parts of good garden loam, and leaf mold to which has been added a generous quantity of fine clean sharp sand. Make sowings about eight weeks before your usual outdoor planting time. Plant may be set in the open ground where they are to remain after soil has become warm and all danger of cold weather is past. Easily grown if directions on the seed packages are carefully followed. Extra care in sowing seed and handling plants will reward you with blooms of unsurpassed elegance and beauty.

BURPEE'S SNAPDRAGONS

Celestial Snapdragon Pkt. 20¢.

Snapdragons (botanically antirrhinums) have always been universal favorites for color in the garden, in the greenhouse during the winter, and as cut flowers. Of easiest culture, succeeding in ordinary well-drained garden soil—in full sun or semi-shade. The gorgeous flowers are freely produced for several months, and until frost where conditions are favorable. Sow seeds outdoors when soil has become quite warm; for earlier blooms sow indoors six weeks before your regular outdoor planting time. Full cultural directions on every packet. Best treated as annuals, although they are biennials in sections having mild winters.

"Majestic" Snapdragons Semi-Tall Giant Flowered

Plants are compact and bushy. 18 to 24 in. high, and bear many massive, hyacinth-like spikes closely set with flowers as large as those of the Tall Giant (Maximum) type, offered on next page. The spikes are borne well above the foliage, the central one being slightly taller than the others. All are sturdy, upright and so strong as not to need staking. Ideal for beds, borders, cutting and pot culture.

1704 Avalanche Handsome pure white blooms well displayed on large, attractive spikes. A foremost variety.

1873 Celestial Flowers are of a beautiful salmon-rose color, large and nicely placed on the broad, compact spikes. Exquisite color, rich and glowing, yet soft and refined. All-America Winner.

Burpee's Early Flowering Sweet Peas

Varieties are arranged in each color class from deep to light shades

Burpee's Early Flowering Sweet Peas come into bloom outdoors before the summer heat arrives—3 to 4 weeks earlier than the Giant Spencer varieties offered on pages 44 to 48. They are valuable for winter flowering under glass, also especially adapted for growing in frost-free sections and for earliest blooms outdoors in the North. Sweet Peas do best in cool weather. If seed was not sown in the fall, sow as early in the spring as the ground can be prepared. They prefer an open, sunny location, and deep, rich soil which must be well drained.

* We have marked with a star (*) the varieties that we particularly like in each color class; if you are in doubt as to which to choose, make your selection from those thus marked.

Burpee's Annual Larkspurs

For Perennial Larkspurs,
see *Delphinium*, page 82.

One of the most beautiful and desirable flowers for the garden and cutting. Easily raised, quick growers, and very free flowering; produce a wealth of large, double blooms on long, attractive spikes. Even the deep green, finely divided foliage is pretty when plants are not yet in bloom.

The culture of annual larkspur is quite easy. They do best in a sunny position, in rich, well-drained garden soil free from fresh manure. As they like cool weather in which to germinate and to grow best, seed should be sown as early in the spring as the ground can be worked—the earlier, the better—but do not sow in cold, wet ground. We suggest sowing seed where plants are to bloom, as they sometimes resent being transplanted. When seedlings are large enough to handle, thin to stand 1 to 1½ ft. apart.

Giant Imperial

Grow Upright Like Delphiniums

Attractive flower-spikes, 3 to 4 ft. tall, which stand upright, close to the center stalk—a decided improvement on older spreading types which took up too much space. Well-formed, large, double flowers in a wonderful range of colors.

- 2121 Blue Bell** Clear azure-blue or silvery lavender.
2166 Dark Blue Spire Intense Oxford-blue; distinct.
2165 Carmine King Deep carmine-rose. Brilliant.
2126 Daintiness Delicate lavender, a soft, rich tone.
2131 Dazzler Improved Deeper and brighter carmine-red than old Dazzler. Wonderful color; quite sunproof.
2142 Glitters Scintillating salmon-cerise; the brightest of all larkspurs. Large, double flowers fill the spikes, the laterals coming into bloom at almost the same time as the main spike, which is quite unusual. Not so tall as others and more showy because of the many blooms.
2267 Lady Lenore Stately spikes of soft salmon-pink.
2167 Lilac Spire Improved Soft lilac, silvery sheen.
2129 Los Angeles Improved Luminous salmon-rose.
2157 White King Extra large, fully double, pure white flowers, closely placed on heavy spikes. Profuse bloomer.

Burpee's Perennial Flower Seeds

Perennial Flowers are the hardy, permanent ones that live for years. Plants grow to the flowering stage each year and die down again to the roots, which remain alive but dormant until the next season. Some perennials will flower the first year from seed if it is sown early, although two seasons are usually required. Perennials are most important flowers in the garden. With proper selection they can be had in bloom from early in the spring until late in the fall, beginning with the lovely, dainty Rainbow Rock Cress (*Aubrietia*), Golden Alyssum, Siberian Wallflower, Columbine, and many others, ending the season with the fall Chrysanthemums. Cultural directions are given on every bag. The Burpee leaflet, "Perennials from Seed," will be sent **free** upon request.

Average heights and blooming season are given in the description for each class; some variation is natural in different localities.

BURPEE'S DAHLIA ROOTS

Each year on our Fordhook Farms we try out hundreds of varieties of dahlias and select those that are the best growers, freest bloomers, and which we recommend as the best for you to plant. All are listed here, with some outstanding varieties that we ourselves have created. Whether you select the massive Decorative, the lovely Cactus, or the small Pompon varieties, you will be delighted with the results, whether for garden display or cut-flower purposes. We supply **strong root divisions** from field-grown clumps.

The American Dahlia Society has adopted a classification for all dahlias according to the formation of the flowers. After each name we use initials to denote the class to which that variety belongs. Thus:

F. D. = Formal Decorative; I. D. = Informal Decorative; C = Cactus; S. C. = Semi-Cactus.

Golden Ball Pompon Dahlias

Pompon Dahlias

Pompon Dahlias have always been favorites with flower lovers and dahlia fanciers. These smallest of all dahlias combine so many pleasant features that they justly deserve a place in every garden. They grow freely and require little care after planting, and bring forth a wealth of blooms, rewarding the grower with a generous supply of gorgeous cut flowers during the late summer and fall. Plants are of stocky growth, quite branching and extremely free flowering. Nice for borders; invaluable for table decoration, as they keep in good condition for a long while after cutting.

HARDY GARDEN LILIES

Easy to grow in any good, well-drained garden loam to which has been added a generous quantity of leaf mold. Once established, they will increase in beauty each year. Most all lilies delight in a sunny location, but mulch so that the hot sun does not reach the soil around the base of the plant. All varieties offered are highly decorative in the border, while the dwarfier ones also give a charming touch of beauty to the rock garden. Lily bulbs differ greatly in size according to variety, some 1 in. across, others 3 in. or more; we supply the sizes which will give the best results. We do not recommend Hardy Lily bulbs for house culture.

Burpee's New and Special Vegetables

106 Pole Lima Bean,

Burpee's Improved Giant Podded

90 days. The largest podded of all pole limas. The pods are truly enormous, 7 to 8 in. long, $1\frac{1}{2}$ to 2 in. wide, with five and sometimes six extra large, flat, green beans of the most delicious flavor. Vines are vigorous growing; attain a height of 10 to 12 ft. and freely produce their pods in clusters of 4 to 8 from the bottom to the top of the poles. Pickings may be made continuously from midsummer until vines are killed by frost. A marked improvement over Giant Podded.

Pkt. 25¢; $\frac{1}{2}$ lb. 80¢.

Burpee's Super Green Bush Lima Beans

69 Burpee's Super Green Bush Lima Bean

74 days. A baby bush lima with beans that retain their green color until they are fully matured. Pods are dark green, thick walled, 3 in. long, and contain three, sometimes four, green beans of super-quality; moist and tender. Pods are easy to shell; the yield of beans from a given number of pods exceeds that of other baby lima bean varieties. Plants grow about 18 in. tall and the same distance across, with many bearing branches. It should be valuable for freezing and canning.

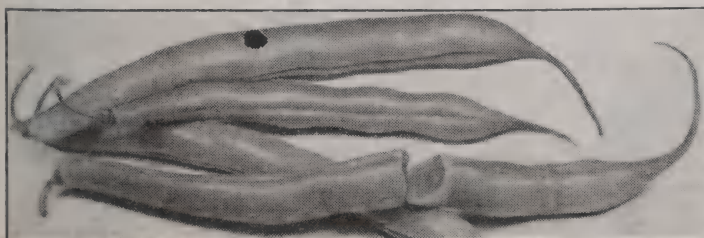

Pkt. 15¢; $\frac{1}{2}$ lb. 80¢.

47 Burpee's Tender Pod Bush Bean

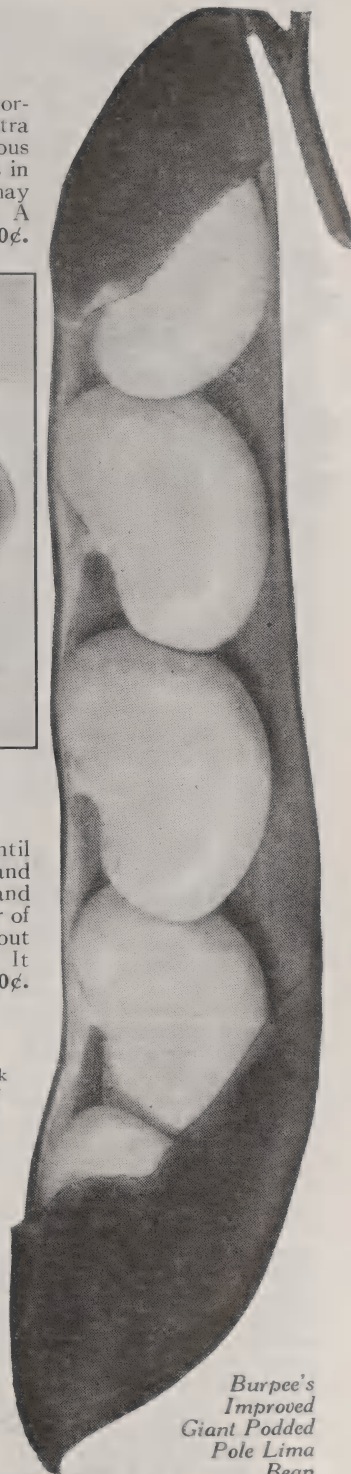

48 days. Pods grow $4\frac{1}{2}$ to 5 in. long, thick, round in cross section, smooth, deep, dark green, curving slightly, with long and distinctively curved tips. They are entirely stringless, fleshy, brittle and of unsurpassed flavor, unequalled for table use and canning. Matures early and is most productive over a long season.

Tender Pod Bush Bean has quality that will be appreciated by every home gardener. Although the length of the pods may not be enough to satisfy market requirements, growers having a local trade would do well to grow some, for once their customers get a taste of Tender Pod they will want more. In appearance, tenderness and quality it is unsurpassed. All-America Bronze Medal Winner.

473 Lettuce, Cosbia 40

80 days. Early, crisp-head lettuce for the East and Middle West, bred by Ross C. Thompson, of the U. S. Horticultural Field Station at Beltsville, Md. As sure a header from spring sowing as the butter-head varieties. The frame of Cosbia 40 is small, the leaves medium green and the head is large in proportion to the size of the plant, weighing about three-quarters of a pound when trimmed. The solidity of the head compares favorably with that of Imperial 44; Cosbia 40 is a few days earlier, more resistant to tip-burn, and while smaller, is still large enough for home and local market use.

The introduction of Cosbia 40 furnishes the home gardener with an "iceberg" type lettuce that can be grown in sections with hot summers. Recommended only for spring planting. Pkt. 25¢; 2 pkts. 45¢.

1023 Summer Squash, Fordhook Zucchini

60 days. Honorable Mention, All-America Selections. A streamlined Zucchini summer squash, long, slim and intense dark green. At best table stage fruits are 12 in. long, 2 in. across, cylindrical, smooth, deep blackish green, straight to very slightly curved. If used at this size, the skin need not be removed. Bush-like plants, small enough for any home garden.

Fordhook Zucchini may be prepared in any way that summer squashes are served—fried in batter or deep fat, stewed or baked. Flesh is creamy white, extremely tender, and the seeds are scarcely noticeable. If left to grow, fruits may attain a length of 2 ft. and a diameter of 3½ in.; they may be used as long as the skin can be pierced with the thumb-nail.

Pkt. 15¢; 2 pkts. 25¢.

Quality compares favorably with that of Marglobe, the standard by which most tomatoes are judged.

Michigan State Forcing Tomatoes

1079 Tomato, Bounty

61 days. Bounty tomato was developed and released by the North Dakota Agricultural Experiment Station. In our trials, the plants are of about the same size as Victor, well suited to close planting in the home garden. The scarlet fruits are slightly larger than those of Victor, smoother, deeper and remarkably free from stem-end cracks. Both varieties are best adapted for growing in the upper half of the United States. Pkt. 15¢; ½ oz. 50¢; oz. 90¢.

ARTICHOKE

1 Green Globe

A perennial which will persist for years and continue to give a good crop if grown on well-drained, rich soil. Where winters are severe, protect crowns with a heavy mulch to keep them from freezing. It is cultivated for its flower buds, whose fleshy bud scales, when cooked, are regarded as a choice delicacy. Sow seed early indoors, setting the plants outdoors after danger of frost is past. One packet will produce about 25 plants; one ounce, 300 plants.

Pkt. 15¢; ½ oz. 40¢; oz. 75¢; ¼ lb. \$2.75.

Artichoke

Follow the Bull's Eye ☉

If you are in doubt as to which varieties to choose, make your selection from those marked with the bull's eye ☉. They have been found most satisfactory throughout the country.

BROCCOLI

Same cultural directions as for cabbage will apply. One pkt. produces about 250 plants; oz., 3000; use ¼ lb. for an acre.

Italian or Sprouting

Resembles cauliflower except in color. One large head is produced on the main stalk, and, after being cut, other smaller heads appear.

157 Calabrese 85 days. The standard variety of sprouting broccoli. Calabrese is grown for home garden, for market, and recently in large quantities for freezing. Plants are very large and vigorous, reaching 2½ or 3 ft. in height under good conditions, with the central head 5 or 6 in. in diameter.

Pkt. 15¢; ½ oz. 40¢; oz. 75¢; ¼ lb. \$2.25.

Pkt. 15¢; ½ oz. 40¢; oz. 75¢; ¼ lb. \$2.25.

155 St. Valentine 150 days. Large white heads which look like cauliflower; harder and takes longer to mature. Needs a warm climate.

Pkt. 15¢; ½ oz. 45¢; oz. 85¢; ¼ lb. \$3.00.

154 Rapa Also known as **Perennial Turnip**. Produces many small green heads which are cut while green with about 6 in. of stalk. One of the first vegetables to mature in the spring if seed is sown in late summer of the previous year. Delicate flavor.

Pkt. 10¢; oz. 20¢; ¼ lb. 60¢.

Propageno Sprouting Broccoli

BRUSSELS SPROUTS

More delicate in flavor than cabbage. Sow the seed thinly in rows early in June and transplant to rows 3 to 4 ft. apart in the garden or field. When the sprouts begin to form, remove the lower leaves to force all nourishment sent to the lower stem into the sprouts. The flavor and quality of the sprouts are greatly improved by frost. One pkt. will sow 75 ft. of row; an oz. 500 ft.; use 4 to 6 ozs. for an acre.

162 Burpee's Danish Prize ☉ 125 days. Strong-growing, robust variety of large, solid, round sprouts set thickly on nearly the entire length of the tall stems. 2 to 2½ ft. tall. Crop of seed is very short. Pkt. 15¢.

158 Long Island Improved 120 days. Grown extensively on Long Island for the New York market, where it always brings a good price. Long Island Improved Brussels Sprouts

GREEN-POD BUSH BEANS

Beans are one of the most satisfactory and productive vegetables, because they grow so vigorously and bear with such wonderful abundance. Plants grow from 15 to 20 in. tall. Do not sow seed until the weather is quite warm; in the vicinity of Philadelphia, early May is about the right time for the first sowing. A warm, well-drained, sandy loam is best suited. The pods are most delicious if picked before they have reached full size, and the plants will continue bearing much longer. To provide for a continuous supply of tender beans, seed should be sown every 2 weeks until early August. Plant in rows not less than 18 in. apart; space seed 2 to 3 in. apart in the row, cover with 2 in. of soil, and firm the surface to assist germination. One pkt. of seed will sow about 25 ft. of row; one lb. 150 ft.

10 Burpee's Stringless Green-Pod ©

Has the Most Delicious Flavor of All Green-Podded Beans

49 days. The attractive green pods are about 6 in. long, slightly curved, so thick, even when quite young, as to be double-barreled, and when fully grown, the pods are meaty and juicy, entirely stringless. Always tender, brittle, and of the finest flavor. The plants are medium large, spreading, with dark green foliage; they are of strictly bush form and enormously productive. Seeds are a dark coffee-brown color.

Burpee's Stringless Green-Pod has long been considered the standard of quality for all beans, regardless of type. Its quality and tenderness have never been duplicated. A favorite for home use as well as for canning and commercial planting. When introduced in 1896, it was the only stringless green-pod bush bean in existence. A great bean with a long and respected history, parent of many varieties and still unsurpassed for quality, regardless of what others may claim.

The plants are of strong growth, compact, and bear a heavy crop of pods for a long time. Fulfills the same purpose as Burpee's Stringless Green Pod in the home garden, market garden and cannery. Pods are, however, not as thick, and lighter green in color. Their appearance in market is unusually attractive. Productive and adapted to the entire United States. Quality is excellent.

20 Keeney's Stringless Refugee

Bansei, Edible Soy Bean

EDIBLE SOY BEAN

35 Bansei

96 days. Since the recent introduction of vegetable type soy beans into this country, the demand for seed has constantly increased. These beans are not only delicious when eaten green or dry, but they are also an excellent source of Vitamins A, B, and G. The Bansei variety is one of the earliest and most productive of all and very adaptable in its growing requirements; it will produce crops in nearly any section of the country. Plants grow 24 in. high and do not require support. They are literally loaded with pods, as may be seen by looking at the picture to the right. The individual pod gives you an idea as to the size of the beans themselves. Seeds are bright green while young and yellow when mature. Ask for cooking instructions when ordering seed. **Pkt. 10¢;**

WAX OR YELLOW-POD BUSH BEANS

Wax-Pod Bush Beans share with Green-Pod Bush Beans all the qualities that make them one of the first requirements of every gardener and grower. Wax Bush Beans grow vigorously almost anywhere, present no difficulties of cultivation, and produce tremendous crops. Their appetizing, waxy yellow pods and their delicate, distinctive flavor make them a favorite in market or home garden. 33 Burpee's Brittle Wax—Stringless

One of the Best Flavored of all Yellow-Podded Beans

52 days. Another quality Burpee variety. Plants are of medium size, erect, leafy, and very productive. The attractive pods measure $5\frac{1}{2}$ to 6 $\frac{1}{2}$ in. in length and are clear, light waxy yellow in color, round, slightly curved, and quite smooth. There is no trace of string or fiber at any stage of growth. Flesh is tender, brittle, and of the finest flavor.

The kidney-shaped seed is pure white, with irregular black markings around the eye. The many desirable features of Brittle Wax, which include wide adaptability to climatic conditions, attractive appearance of both pods and plants, and exceptional quality, have made it the most widely planted of all wax-podded bush beans. Equally desirable for home uses, for market and for large canners. If your plantings have never included Brittle Wax, you should give it a trial. Order early, for it is so popular with both home and commercial growers that the demand for seed frequently exceeds the supply.

44 Burpee's Kidney Wax Bean—Stringless ☉

The Preference of Many Home and Market Gardeners

52 days. Outstanding in every way. This Burpee introduction is pronounced by many the most tasty of all beans. Pods are almost straight, broad, yet quite thick, meaty, and entirely stringless at all stages of growth; 6 to 7 in. in length, $\frac{1}{2}$ in. broad, $\frac{3}{8}$ in. thick, and of a bright lemon-yellow, reflecting their tenderness and delicate flavor. Prized for canning.

The popularity of this bean is due to several important factors—pods are remarkable for their meatiness, fine flavor, brittleness, attractive

clean color, and their absolute freedom from strings; plants are noted

for their great prolificness. They are strong growers, forming upright bushes, 18 to 20 in. in height. Seeds

are white with brownish black eye. It is planted by many to the exclusion of all

other wax-pod beans, and this is not to be wondered at

when you consider all its good points as mentioned above.

Perfectly stringless at all stages. Black-seeded. The plant is branching, sturdy and upright, every branch carrying a heavy crop of very attractive, uniformly colored, large pods which can be quickly picked. Valuable for its productiveness both for the home and market gardener; its size and appearance make it a ready seller.

41 Rustproof Golden Wax

Stringless—Top Notch Strain

50 days. Extra early in maturing. The straight, golden yellow pods are broad and flat, 5 in. long, stringless, brittle, and of good quality. Profuse bearer. Especially suitable for the home garden or early market. The plants grow more compactly and more erect than the old Golden Wax, bearing the pods well off the ground. Other features are that it reaches the peak of its season very quickly and is almost totally resistant to bean rust, which, in wet seasons, renders some varieties of Wax Beans unsightly or unmarketable.

Pkt. 10¢; $\frac{1}{2}$ lb. 25¢; lb. 40¢; 2 lbs. 75¢; 5 lbs. \$1.75.

55 Burpee's Stringless White Wax

60 days. White-seeded, round-podded wax bean of really choice quality. Bears attractive, well-formed, 5 in. pods continuously for many weeks. The bright lemon-yellow pods are straight, brittle, meaty, tender, and entirely stringless at all stages of growth. Seeds, being large and pure white, are desirable as shell beans. The seeds of any other beans can, of course, be used for baking, but the white-seeded varieties are usually preferred for this purpose. Abundant yielder. Popular for canning and most desirable for home and market use. *Seed supply is short.*

24 Giant Butter or Fava Bean

Mammoth Pods with 5 to 7 Lima-like Beans

85 days. Giant Butter or Fava Beans are much harder than other beans and should be planted as early in the spring as the ground can be worked; they will not thrive in summer heat. Plants are large and erect, true bush form, and heavy yielders. Pods are glossy green, 7 in. long, and quite broad, and contain 5 to 7 large, broad, flat, light green beans, which are valuable for use as green shell beans. The pods are not edible; the large beans somewhat resemble Lima Beans and should be used in the same way, either cooked fresh or as a winter shell bean. Flavor is somewhat like that of the pea. Becoming very popular, especially in large city hotels and restaurants. Dry seed is large, circular, flat, reddish brown with black eye.

Try a planting this year; plant early. One pkt. will plant 15 ft. of row;

1 lb. 75 ft. of row. Pkt. 10¢; $\frac{1}{2}$ lb. 35¢; lb. 65¢; 2 lbs. \$1.20.

POLE BEANS

Pole Beans are extremely productive. They come into bearing later than the bush varieties, but bear for a longer period, and some produce bigger pods. They are less hardy, however, so should be planted a week later. They mature in from 64 to 80 days, depending on variety, and do best if the vines are given support, the most frequently used being rough poles, 7 ft. or more tall, sunk in the ground 1½ to 2 ft. deep, and 3 to 4 ft. apart.

Sow seed when the soil has become warm but not later than June 15. Place 5 to 8 beans around each pole, cover with 2 in. of soil, and firm to assist germination. When plants are well started, thin so that 3 or 4 of the strongest remain to a pole. A packet of seed is enough for 15 poles; 1 lb. of seed for 100 poles. Pole Beans may also be planted along a trellis or fence, sowing 300 ft. of row with 1 lb. of seed.

72 Kentucky Wonder or Old Homestead ☉

65 days. We prefer this to all other green-podded pole beans. It is early, climbs well, and bears a heavy crop of large, green, curved pods, 7 to 9 in. long, in clusters. The pods are thick and meaty, tender, brittle, and when young, are entirely free from string or fiber although small strings develop later. These strings do not impair the quality of the pods, and they can be eaten until late in the season. Though thick, the pods appear slender on account of their great length. The light brown seeds have a tasty, distinctive flavor which makes them most desirable for use as shell beans. **Pkt. 10¢; ½ lb. 20¢; 1 lb. 35¢; 2 lbs. 65¢; 5 lbs. \$1.50.**

82 White Seeded Rust-Resistant Kentucky Wonder

79 Golden Cluster Wax ☉

74 days. Pods are a light waxy yellow, 5 to 7 in. long; perfectly straight and flat. The flesh is brittle and of fine quality. Do not show any strings until they reach maturity. Prolific bearer; strong growing. Pods produced in clusters. Popular for snaps, green shell beans and dry beans for winter—a true all-purpose variety. The seeds are white. **Pkt. 10¢; ½ lb. 25¢; 1 lb. 40¢; 2 lbs. 75¢; 5 lbs. \$1.75.**

Kentucky Wonder Pole Bean

SHELL BEANS (may be used either green or dried)

Grown mostly as dried beans for winter use. The culture is similar to that recommended for Green-Pod Bush Beans, but shell beans should be left on the vine until the pods are matured. The vines are then cut, allowed to dry, and the beans threshed and thoroughly dried out before they are put away for later use. One pkt. will sow about 25 ft. of row; one lb. 150 ft. of row; 60 lbs. for one acre.

29 White Marrowfat 100 days. Pods are large, flat, straight, and well filled with 5 to 7 large white beans valued for baking. **Pkt. 10¢; ½ lb. 20¢; 1 lb. 30¢; 2 lbs. 55¢; 5 lbs. \$1.25.**

26 Dwarf Horticultural 65 days. Thick, flat, green pods, 5 in. long, splashed with carmine at maturity. As they are almost stringless, young pods may be used as snap beans. The beans may be used green or dried. No shell bean is more delicious. Light buff seeds spotted with red. **Pkt. 10¢; ½ lb. 20¢; 1 lb. 35¢; 2 lbs. 65¢; 5 lbs. \$1.50.**

57 French Horticultural 73 days. The attractive broad, flat, green pods are about 7 in. long, straight and heavily splashed and streaked with bright carmine. POLE LIMA BEANS

Pole Lima Beans are easily grown in any rich, well-drained garden soil. While they mature somewhat later than bush lima beans, they greatly outyield them per square foot of garden space. Vines should be given support, the most frequently used being rough poles, 7 ft. or more tall, sunk 1½ to 2 ft. deep in the ground and spaced 3 to 4 ft. apart each way. Sow seeds when soil has become warm; put 6 to 8 seeds (eyes down) around each pole, cover with 2 in. of fine soil and firm to assist germination. When plants are well started, thin so that 3 or 4 of the strongest remain to a pole. One pkt. will plant 10 poles; 1 lb. for 50 poles; 35 lbs. for one acre. Small plantings may be made along a fence or trellis, putting several beans 1 ft. apart, later thinning to one strong plant; such plantings would require 1 lb. to about 50 ft. of row.

105 Burpee's Best Pole Lima ☉

92 days. The Fordhook among the pole limas. Burpee's Best has been making friends rapidly since its introduction in 1934, and we believe that it has only begun its march toward popularity. You know Fordhook Bush? Then just imagine a pole bean with all the good characteristics of Fordhook—its thick seed, straight, smooth pod, its rich tenderness, but with larger pods, and three or four times as many on each plant.

Burpee's Best will climb 10 to 12 ft. under average conditions, and produce pods in clusters of 4 to 8 along its entire length. The pods are straight, 5 to 6 in. long, 1½ in. broad, and nearly one inch through, well filled with 4 or 5 and sometimes 6 big, thick, plump beans of delicious flavor. Burpee's Best represents a marked improvement over Challenger Pole, and we suggest growing it in its place.

103 Carolina or Sieva

78 days. The "Butter Bean" of the South. The vines quickly produce a fine crop of small, attractive pods, 3½ in. long, each with 3 or 4 small, flat, green beans of splendid quality. Especially valuable in sections where early frosts will not permit other lima beans to mature a crop.

Pkt. 10¢; ½ lb. 25¢; lb. 45¢; 2 lbs. 85¢; 5 lbs. \$2.00.

BURPEE'S IMPROVED GIANT PODDED

The largest podded of all pole limas. See page 97.

95 Burpee's Sunnybrook ☉

84 days. The popularity of this fine pole lima bean is due to its extreme earliness and tremendous yield, each spike carrying from 5 to 10 pods of large size. The pods are closely packed with 4 and often 5 large, thick, meaty, light green beans of the finest quality. Pods grow 7 to 8 in. long and 1¼ in. wide.

Pkt. 10¢; ½ lb. 30¢; lb. 55¢; 2 lbs. \$1.00; 5 lbs. \$2.35.

102 Florida Speckled Butter

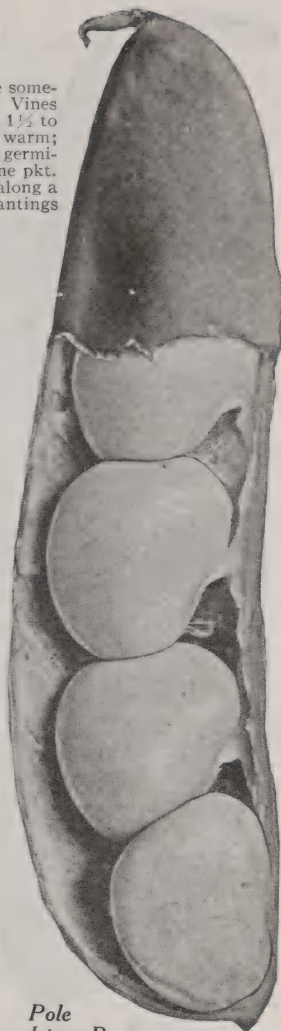

78 days. Considered one of the most prolific of limas. Vigorous plants; pods medium dark green, 3 to 3¼ in. long, especially suitable for the South. Each pod contains 3 and occasionally 4 beans, which are small, flat, white marked purple, but if picked when young, the markings on the seed will not have been developed.

Pkt. 10¢; ½ lb. 25¢; lb. 40¢; 2 lbs. 75¢; 5 lbs. \$1.75.

99 King of the Garden

88 days. A strong grower and uniformly large podded. The pods contain 4 and often 5 large beans which are easily shelled, of handsome appearance and excellent quality. One of the leading pole lima beans for home and market gardeners.

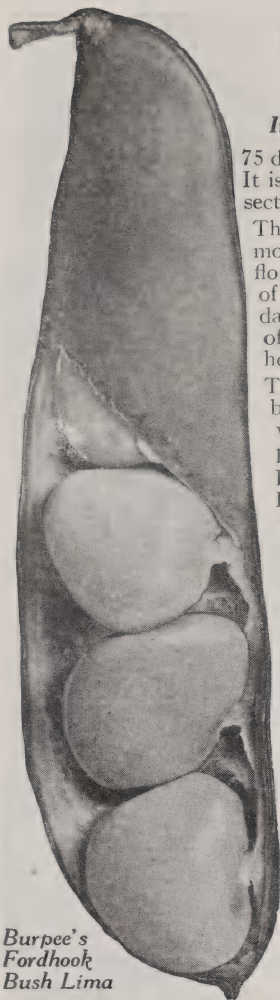

Pkt. 10¢; ½ lb. 25¢; lb. 40¢; 2 lbs. 75¢; 5 lbs. \$1.75.

65 **BURPEE'S FORDHOOK BUSH LIMA BEAN** ©

Introduced by Burpee and named for Burpee's Fordhook Farms

75 days. Burpee's Fordhook is known and grown wherever beans are planted. It is the leading variety of bush lima beans, and in the important commercial sections it is usually the only variety grown which shows its desirability.

The plant is bushy, upright, with large leaves of heavy texture, 20 in. or more in height, with a spread of 2 ft. or more, very vigorous, with many flowering branches. Pods are borne close to the plant and often on the ends of the branches. They are 4 to 4½ in. long, 1 to 1¼ in. wide, and ¾ in. thick, dark green, straight to slightly curved, crowded with 3 or 4 large, thick beans of a delicious flavor, not unlike chestnuts. Seeds are green when immature, holding this color until quite old, becoming cream colored when ripe.

The dry, mealy quality of Fordhook is familiar to every one who uses lima beans. The beans are large and there is, therefore, less waste in shelling than with other varieties. Its bearing season is long and a planting may be picked over a period of a month or more.

For home garden or commercial use we recommend this great bean highly. Fine quality, always salable, attractive appearance, and large pods allow us to say that in lima beans, Fordhook is the best. (For a pole bean of the Fordhook type, plant Burpee's Best.)

We grow our Fordhooks ourselves in California, selecting them continuously and checking over stocks by trials at Fordhook Farms. As the originator of this fine bean, we invite your order for the finest seed obtainable. **Pkt. 10¢; ½ lb. 25¢; lb. 45¢; 2 lbs. 85¢; 5 lbs. \$2.00.**

How to Grow Bush Limas

Lima Beans succeed well in almost any good garden soil but do best in a rich, well-drained, sandy loam. As seed is sensitive to cold and wet ground, it must not be planted until the soil has become quite warm and fairly dry. Plant the seeds edgewise, eye down, 5 in. apart in rows 2½ to 3 ft. apart, and cover with 2 in. of fine soil. When the plants are well started thin to stand 12 to 15 in. apart for large-seeded varieties and 9 to 12 in. for small-seeded varieties, such as Philadelphia Bush, Wood's Prolific, and Baby Fordhook. Give frequent and shallow cultivation until blossoms appear, but do not cultivate or handle plants when they are wet. Pick the pods as soon as the beans have reached edible size. One pkt. of seed will sow 25 ft. of row; one lb. for 100 ft.; 60 lbs. to an acre.

61 **Baby Fordhook Bush Lima**

70 days. A thick-seeded, small lima bean of far better quality than the flat type; bred by the U. S. Department of Agriculture. It was designed especially for canning and freezing where a high quality baby lima bean has been sought for many years. Home gardeners, too, will appreciate Baby Fordhook with its surprisingly heavy crop of pods under almost any conditions. Its quality is excellent and the beans retain their green color until they are quite old.

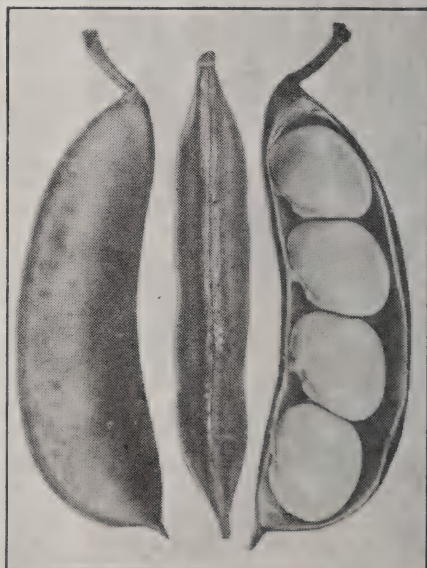

Plant is truly bush, about 14 in. tall, with shiny, dark green leaves, heavily productive, bearing pods quite close to the stem. Pods are 2¾ in. long and ¾ in. wide, thick, slightly curved, containing 3 or 4 beans, close but not crowded in the pod, as may be seen in picture to the right. Seed is thick, green, turning cream when dry.

Pkt. 15¢; ½ lb. 35¢; lb. 60¢; 2 lbs. \$1.10; 5 lbs. \$2.60.

60 **Burpee's Bush Lima**

78 days. The original dwarf, large-seeded Bush Lima. First introduced exclusively by Burpee in 1890. It is an immense yielder. The pods and beans, however, are not so large, nor are the bushes so prolific, as those of the Burpee Improved Bush Lima. The bushes, 18 to 24 in. tall, are of stout, erect growth, yet branching so vigorously that each plant develops into a rounded plant about 2 ft. in diameter. Pods grow 4½ to 5 in. long and contain 3 or 4 large beans of the highest quality and as large as those of pole limas.

63 Burpee's Improved Bush Lima Bean

*Another World Famous
Burpee Introduction*

75 days. The best of the flat-seeded bush limas, and a decided improvement over Burpee's Bush. The pods are larger, the individual beans, either green or dry, are nearly twice as thick, and the plants are more productive and begin to bear 3 days earlier than Burpee's Bush Lima. They are large and vigorous, meeting in a three-foot row under average conditions. They are of true bush habit, but when well grown will send out lateral, pod-bearing branches which rarely exceed 18 in. in length and do not require support. Pods are 5 to 5½ in. long, and 1 to 1½ in. broad, slightly curved and moderately thick, containing 4 or 5 very large beans of attractive appearance and fine quality.

Burpee's Improved is popular where a lima with a somewhat flatter seed than Fordhook is demanded. It is easy to shell. Distinct enough from Fordhook in shape and flavor, it supplements rather than competes with that excellent variety. Try both kinds in your garden this season. You can't go wrong with either, whether you grow for home or market; in fact, many gardeners do plant both varieties each year. Burpee's Improved was introduced by Burpee in 1907, and now, 35 years later, it has not been superseded by any other variety. It is still the best, large, flat-seeded bush lima bean. We feel a personal responsibility for the maintenance and improvement of this and our other varieties.

66 Burpee's Philadelphia Bush Lima

68 days. Of special value because it is the largest-seeded bush lima that produces well in the north. It is sure to set a full crop under conditions where some large-seeded limas fail. Pods grow 4 in. long, straight to slightly curved, flat, 1¼ in. wide; each contains 3 or 4 flat, medium-sized beans which are green when immature, turning white. Plants are vigorous, very productive, bearing the bulk of their pods in the center of the plant. Suitable for the home garden, market, canning and freezing. Surpasses the small butter beans in quality.

Pkt. 10¢; ½ lb. 25¢; lb. 45¢; 2 lbs. 85¢; 5 lbs. \$2.00.

68 Wood's Prolific Bush Lima

68 days. **Improved Henderson Bush** or **Baby Lima**. One of the earliest maturing bush lima beans, so is especially desirable in northern states where growing seasons are short. Pods are small, 3 to 3½ in. long, each containing 3 or 4 plump beans of delicious, sweet, buttery lima flavor. Plants are truly prolific, and while they begin to bear very early, they will continue to produce until killed by frost. Use either fresh or dried.

Pkt. 10¢; ½ lb. 25¢; lb. 40¢; 2 lbs. 75¢; 5 lbs. \$1.75.

Burpee takes pride in pointing out that four of the six varieties of bush limas listed on these two pages are Burpee introductions. Every one has become popular; each is distinct enough from the other as to build up an enormous demand for all four. **For the best seed, buy from the originator.**

The average number of days required from the time the seed is sown until vegetables are ready for use is given with each variety. Where plants must first be grown, such as Celery, Cabbage, Peppers, Tomatoes, etc., the number of days to maturity is from the time plants are set in the field. Of course, the time is average and some variation is to be expected, depending on the season, locality and time of sowing.

Follow the Bull's Eye

We have used this mark  for years to guide the gardener in the selection of varieties which we believe will give the best results under varied conditions of soil and climate. This mark , usually called a bull's eye, was used by the ancient alchemists to represent gold. It therefore is most appropriate for indicating the varieties which we consider the **best of their class**. If you are not thoroughly posted which varieties to choose as the most suitable for your particular section, we suggest that you make your selection from those marked with the bull's eye. They have been found most reliable under all conditions.

Good For All

How to Grow Beets

Sow seeds as early in the spring as the ground can be worked. For a continuous supply make sowings 3 to 4 weeks apart up to the end of July. Sow seed in rows 1½ to 2 ft. apart and cover 1 in. deep. Thin plants to stand 3 to 4 in. apart in the row. The later sowings will produce the best beets for winter storing. Gather the roots with the approach of cold weather and keep in a cool cellar, packing them in slightly moist earth until ready to use. Beet tops are used quite extensively for "greens." One pkt. of seed will sow 25 ft. of row; one oz. for 100 ft. A rich, sandy loam, mellow and deep, produces the best roots.

115a Detroit Dark Red, Short Top ⊙

60 days. An improved and refined strain of Detroit Dark Red. It has tops which average about 3 in. shorter than those of the regular strain, making it suitable for growing on muck or for any use where large tops are not necessary or desirable. Roots are also slightly smaller and more globular. The flesh is a uniform deep red with the zones so inconspicuous that the flesh seems to be one solid ball of deep blood-red. Ideal for home use.

Pkt. 10¢; oz. 35¢; ¼ lb. \$1.00; ½ lb. \$1.75.

115 Detroit Dark Red, Medium Top

CABBAGE—For all Seasons

Start early cabbage in the hotbed or house the middle of February. Late cabbage for winter use is sown in a seed-bed outdoors in late May or early June. A pkt. will produce about 250 plants, an oz. about 2000 plants. $\frac{1}{4}$ lb. sown in the hotbed gives sufficient plants to set out one acre. Sown

in the open seedbed, $\frac{1}{4}$ lb. is needed for planting one acre. Days to maturity given with each variety are figured from the time the plants are set in the garden; allow 30 days to produce plants from seed. Treat seed with Semesan to prevent damping-off.

Yellows-Resistant Cabbage

Yellows-resistant strains were introduced by the Wisconsin Agricultural Experimental Station so that cabbages could be grown in localities where infested "cabbage-yellows" soil had prevented non-resistant varieties from producing a crop. If you live in such a locality and have had trouble, try the following varieties:

191 Early Jersey Wakefield ⊙

63 days. An improved strain especially selected for yellows-resistance. The heads are of conical form, with a broad base and pointed top. Compact plants and very productive. About the first of this group of resistant cabbages to mature. Fine for cole slaw, salads and for boiling. **Pkt. 10¢; oz. 50¢; ¼ lb. \$1.85.**

170 Marion Market ⊙

73 days. Resembles Copenhagen Market but matures about 6 days later than our Special Strain and makes a much larger plant. The heads are almost round and very solid, weighing 5 to 6 lbs. each. Favorite early variety for market or home use on yellows-infested land. **Pkt. 15¢; oz. 65¢; ¼ lb. \$2.35.**

172 Improved Allhead Select

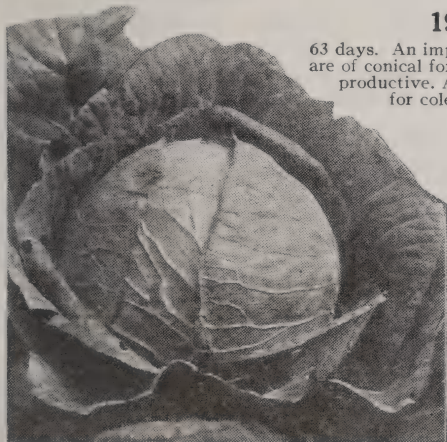

72 days. Firm, solid, well-rounded, flattened heads carried on short stout stems. The core is decidedly small. It is the earliest of the yellows-resistant large flat-headed cabbages. How to Grow Cauliflower

For an early crop, start the seed indoors or under glass in late February and set plants into the garden when soil has become warm. For a main or fall crop, sow the seed in a specially prepared seed-bed or coldframe during June and set plants out in early July. It takes about 30 to 40 days for the plants to grow large enough for setting into the field. One pkt. of seed will produce about 150 plants; 1 oz. 4000 plants; 2 ozs. are required to produce enough plants for one acre. Days to maturity are from the time the plants are set out in the garden.

CHINESE OR CELERY CABBAGE

Not a true cabbage; resembles Cos Lettuce somewhat. May be served like lettuce, or, when shredded, makes a delicious cole slaw. Boiled, it is far more palatable than ordinary cabbage. Where summers are cool, seed may be sown in spring, but in the vicinity of Philadelphia, seeds sown early in August have proved to give the best results. Makes full-size heads in 73 to 78 days. A packet will sow about 25 ft. of row, an oz. about 200 ft. Be sure to grow some this year.

212 **Pe-Tsai**

78 days. Large Cos Lettuce-like heads 10 to 12 in. tall, the inner leaves tightly folded around the thick, pure white heart which is well blanched, tender, juicy, and has an agreeably pungent flavor either raw or cooked.

Pkt. 10¢; oz. 50¢; ¼ lb. \$1.85.

211 **Wong Bok**

78 days. Short, broad, tightly folded, well-blanching heads, 8 to 10 in. high. Excellent quality, crisp and delicious; tender and juicy. Hearts are suitable for serving as individual portions.

Pkt. 10¢; oz. 50¢; ¼ lb. \$1.85.

214 **Chihli** Ⓞ

73 days. Deserves to be largely planted, as it is an early and sure-heading Chinese Cabbage, growing 18 to 20 in. tall and about 3½ to 4 in. thick. The firm, well-blanching, white heads taper near the top. Leaves are broad, smooth and fringed at the edges. For market and roadside sales, Chihli is extensively grown because the large, attractive heads sell readily; it is the most popular for the home garden. Very crisp and tender.

Pkt. 15¢; oz. 60¢; ¼ lb. \$2.15.

Chihli Chinese Cabbage

CARROTS

Sow seed thinly in early spring in rows not less than 12 in. apart and make succession sowings every two weeks up to the early part of July. Cover with $\frac{1}{2}$ in. of fine soil. Thin the small early varieties to stand 2 in. apart in the row and the larger later varieties from 3 to 4 in. A rich, mellow, deeply worked soil gives the finest carrots. For nice, tender carrots in the fall or for winter storing, sow seed from the middle of June to first of July. A pkt. will sow about 40 ft. of row; an oz. about 200 ft.

224 Burpee's Goldinhardt

75 days. Our special strain of Red Cored Chantenay. Selected for uniformity, trueness to type, deep exterior and interior color, and a small, indistinct core. Roots are 5 to $5\frac{1}{2}$ in. long and $2\frac{1}{4}$ in. thick at the shoulder, very gradually tapering to an abrupt stump end. Flesh is fine grained, tender, and of a delicate, sweet flavor. One of the better varieties for planting where the soil is heavier than is desirable for root crops, but at the same time will grow other vegetables. Popular with canners, commercial growers, and home gardeners because of heavy yield, all-round excellence and the bright golden orange flesh clear to the center. Skin is an attractive orange-scarlet. 223 Burpee's Oxheart Carrot ☉

75 days. Splendid midseason carrot, which may be used while the roots are still small. If allowed to mature, the broad, stocky, heart-shaped carrots will measure 5 to 5½ in. long and 3 to 3½ in. across where they are thickest; this gives a large amount of edible flesh which is light orange, tender, sweet, fine grained and of delicious flavor. Because of their shape, they are easy to harvest and do well in shallow or heavy soils where longer carrots sometimes fail to make attractive roots. Fine for home use. **Pkt. 10¢; oz. 45¢; ¼ lb. \$1.70.**

229 Burpee's Improved Long Orange

85 days. If left to reach full growth, roots will measure 10 to 12 in. long and 2 in. thick at the shoulder, slightly tapering to a point. Of uniform size, with beautiful deep orange skin and bright orange-red flesh. A superb carrot for those having a deep, rich, mellow soil. A heavy cropper and a perfect winter keeper. It is also used for stock feeding. **Pkt. 10¢; oz. 45¢; ¼ lb. \$1.70.**

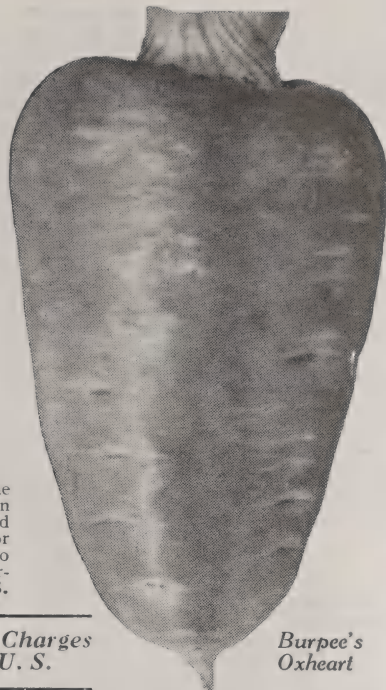

230 Morse's Bunching

75 days. Deep orange sweet flesh with practically no core. Almost cylindrical, smooth, well stump-rooted, 1½ to 1¾ in. thick and 8 in. long. Tops are short, which makes it desirable for bunching. 232 Tendersweet ☉

75 days. An exceptionally heavy yielder; always smooth and uniform. The roots are 8 to 10 in. long, tapering from the shoulder to a rather blunt end. Celery*

Famous for Tenderness and Flavor

130 days. Burpee's Fordhook Celery is, without question, the finest fall and winter variety in existence. Plants are stocky and compact, growing 15 to 18 in. tall. Although comparatively dwarf, they are so solid that they weigh fully 2 lbs. each. Their limited height is of great importance, since the plants are by far more easily blanched than those of the taller varieties. The stalks, after blanching, are a beautiful pure silvery white with a large, tightly folded full heart of the most delicious flavor. Always tender, crisp, without strings, and juicy. The time of maturity and the dark green color before blanching make Fordhook an ideal variety for winter storage. Our special strain of this celery is grown on our Western farms, where conditions are ideal for the production of plump, vital seeds. Yearly selections of outstanding plants are made in order to maintain the high type and purity of Burpee's Fordhook, the finest flavored celery. **Pkt. 25¢; ½ oz. 50¢; oz. 85¢; ¼ lb. \$3.00.**

266 White Plume

112 days. The earliest and the most easily blanched celery; at its best right after digging. Foliage is light green tinted with white. When blanched, the stalks are pure snowy white, tender and crisp, without any fiber or strings. Flavor is rich and nutty. A favorite for fall and early winter use but not recommended for winter storage. **Pkt. 10¢; ½ oz. 25¢; oz. 45¢; ¼ lb. \$1.60.**

282 Giant Pascal

135 days. Considered by many the standard winter celery. The stalks are tall and thick, solid, entirely stringless, and of a rich, nutty flavor; broad, distinctly ribbed, tender, crisp, and very tasty. After blanching they are an attractive light yellow. Inasmuch as the stalks are green, soil should be used for blanching. If properly stored, it will keep in perfect condition throughout the winter months. Whether grown for home or market use, Giant Pascal has always given entire satisfaction. Enormously productive; good quality. **Pkt. 10¢; ½ oz. 25¢; oz. 45¢; ¼ lb. \$1.60.**

**Sow Burpee's—The Best
Seeds That Grow**

267 Easy Blanching

125 days. A second-early celery which will be ready for use soon after Golden Self-Blanching. Plants make a vigorous, upright yet compact growth, and the stalks are easily blanched. They are thick, solid, heavy, unusually meaty, pure white, crisp, altogether free from any fiber or strings, and of extra-fine flavor. Resembles Golden Self-Blanching but stalks blanch white instead of yellow. Desirable for home and market garden. **Pkt. 10¢; ½ oz. 30¢; oz. 50¢; ¼ lb. \$1.75.**

260 Burpee's Golden Self-Blanching ◉

115 days. This is the American-grown seed produced from the dwarf French-grown stock. It exhibits all the excellent qualities of the original, and is sown extensively by home gardeners as well as by market growers. The plants make a compact, dwarf growth and form thick, solid, heavily ribbed stalks which blanch easily into a beautiful clear waxen yellow color. The quality of this variety is superb. The stalks and heart are crisp, solid, heavy, free from any strings, and of the most delicious flavor, which is delightfully sweet and nutty. War conditions made it impossible to offer any seed of the original dwarf strain from France the past season. **Pkt. 15¢; ½ oz. 45¢; oz. 80¢; ¼ lb. \$2.75.**

*Burpee's

Self-Blanching*

How to Grow Celery

For the earliest crop, start the seed in a hotbed or in the house during February or March. For the fall or main crop, sow the seed in the open ground as early in the spring as the soil can be worked into good condition. Cover seed with no more than ¼ in. of fine soil. Celery requires a rich, well-manured soil and plenty of moisture for best results. Soil, boards, or celery paper may be used to blanch the stalks. A pkt. of seed will produce about 400 strong plants; 1 oz. about 7500 plants; ¼ lb. for an acre. Days to maturity are from field setting of plants. Treat seed with Cuproside or Semesan to prevent damping-off of the seedlings.

Golden Plume or Wonderful is a most desirable celery for home or market use.

268 Golden Plume ☉

115 days. Also called **Wonderful**, a name that is most appropriate for this splendid early celery; was developed from the famous Golden Self-Blanching; the stalks, however, are larger. Some gardeners consider it the best early celery in existence. It is quite resistant to blight and rot and possesses very good eating qualities. Plants are of medium size, stocky, compact, and have a solid, full, creamy heart of the highest table quality. The thick, heavy stalks blanch readily to a beautiful light yellow; the flavor is distinctly nutty and rich. Fine for home and market garden.

Pkt. 15¢; ½ oz. 40¢; oz. 75¢; ¼ lb. \$2.75.

**Be sure to grow Burpee's Celtuce; it combines the
tastes and flavors of both Celery and Lettuce.
See second cover and page 1.**

270 French Special or Improved Golden Plume

110 days. An unusually thick-set, compact celery; has no soft stalks, and is free from strings. The rib is 9 to 10 in. to the first joint. Being solid and firm, it is less liable to damage by heat or cold. Plants are of medium size and stocky. The full-hearted, broad, crisp stalks blanch to an appetizing, rich, creamy yellow of the finest table quality. A most desirable celery for market and home garden use.

Pkt. 25¢; ½ oz. 50¢;
oz. 85¢; ¼ lb. \$3.00.

276 Utah or Golden Crisp ☉

130 days. An excellent green celery for fall use or winter storing. Matures about 5 days earlier than Giant Pascal. Plants are compact, stalks broad and thick, exceptionally solid, and when blanched are pure white, crisp, and of the most delicious flavor. Had the market practically all to itself in Salt Lake City, but now its fame has spread far and wide.

Pkt. 10¢; ½ oz. 35¢; oz. 60¢; ¼ lb. \$2.00.

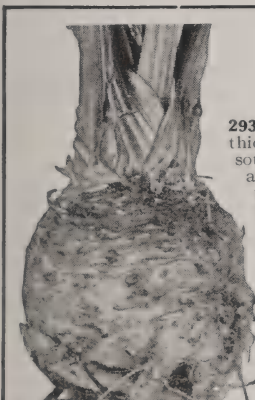

275 Winter Queen

120 days. One of the finest dwarf winter celeries we have ever grown. It resembles Golden Self-Blanching in height and habit, but the leaves are a rich green color and in this respect are not unlike those of Giant Pascal. As it blanches quickly it is ready for home or market much earlier in the fall. The plants make stout bunches of extra-heavy stalks with very large, tightly folded, creamy white hearts which are tender, crisp and of excellent flavor. Valuable for home and market garden.

Pkt. 10¢; ½ oz. 25¢; oz. 45¢; ¼ lb. \$1.60.

Utah Celery

Celeriac or Turnip-Rooted Celery

293 Giant Prague 120 days. The edible portion is the large, thick root, which is highly valued boiled, or is used in vegetable soup, stews, and other dishes. Celeriac grows best in a moderately moist yet well-drained soil, which is fairly rich in barnyard manure. Frequent cultivation is necessary and occasional waterings are desirable. Start the seed in boxes indoors, and when the seedlings are large enough to handle, transplant into the garden to stand about 8 to 10 in. apart each way. Use when the roots have grown about 2 in. across. Grow as you would celery except that it does not require hilling or blanching. The flavor of celeriac is similar to that of celery. Highly appreciated in European countries, and becoming quite popular in the United States; more so when it becomes better known. Roots may be stored in moist earth or sand, as you would beets and carrots, and used throughout the winter. *Crop very short.* Pkt. 15¢; ½ oz. 45¢; oz. 80¢.

BURPEE'S SWEET CORN

Plant the seed after all danger of frost has passed and the soil has become thoroughly warm. Plant either in rows 2½ to 4 ft. apart, spacing the seeds 4 to 6 in. apart in the row, and thinning later to 12 inches; or plant in hills 3 to 4 ft. each way, allowing 2 to 4 plants to remain in each hill, depending on the fertility of your soil. For a continuous supply, sow varieties which mature in succession; also make

succession sowings every 10 to 14 days, allowing enough time for your last planting to mature before the first expected frost in your locality. Sweet Corn maturing in the fall is excellent. Corn should be planted in blocks rather than in a single long row, since pollination and the development of a full set of kernels are then insured. One pkt. of seed will plant 4 rows, each 25 ft. long; 1 lb. for 300 hills.

Hybrid Sweet Corn

Hybrid Corns are of value because of their uniformity of growth and maturity, vigor, high yield, and resistance to Stewart's disease or bacterial wilt. To produce Hybrid Sweet Corn, crosses between an inbred strain and a standard variety or crossing two inbreds must be done each year. Seed saved from hybrids will not come true to type the following year. You must get new seed each year.

374 **BURPEE'S SUNNYBROOK CUCUMBER** ⊙

60 days. An outstanding variety of the long, slender, dark green cucumber type which has recently gained much popularity among both small and large growers. Whether used for pickling when small, or for slicing when fully grown, Burpee's Sunnybrook is a valuable cucumber for the home garden, for local markets and for distant shipping. Fruits are white spined, 12 in. in length and $\frac{3}{4}$ in. in diameter when mature, tapering toward the stem end, and the extremely dark color is maintained for a long time after picking. As the seeds form late in the season, the edible period is longer than that of most varieties. We highly recommend Sunnybrook. **Pkt. 15¢; oz. 35¢; $\frac{1}{4}$ lb. \$1.25; $\frac{1}{2}$ lb. \$2.30.**

400 **Davis' Perfect**

58 days. Shapely white spine cucumber, 10 in. long and $2\frac{1}{2}$ in. thick in the middle, slightly tapering at both ends. The skin is a rich deep green and the flesh is pure white, solid, brittle, and tasty. Its eating qualities are excellent, due to its thickness and the lack of seeds. Retains its color for a long time after being picked; this makes it valuable for market and shipping as well as for home use. Davis' Perfect is also adapted for greenhouse culture. Heavy producer.

Pkt. 10¢; oz. 25¢; $\frac{1}{4}$ lb. 80¢; $\frac{1}{2}$ lb. \$1.45.

How to Grow Cucumbers

Make your first sowing of cucumbers after all danger of frost has passed to supply fruits for summer use, and a second sowing in late June or early July to furnish cucumbers for fall use and pickling. They succeed best in a fertile, light, well-drained soil. Well-rotted manure in the hills and a side-dressing of commercial fertilizer are usually beneficial. Plant in hills 4 or 5 ft. apart, placing 8 to 10 seeds in each hill, and cover with $\frac{1}{2}$ in. of soil. When plants are 6 to 8 in. high, thin to 3 or 4 plants to a hill. One pkt. of seed will plant 15 hills; 1 oz. 50 hills; 1 lb. for one acre. If seed is drilled, one acre requires about 4 lbs. of seed. Control cucumber insects with Red Row Garden Spray and Slug Shot Dust. Treat seed with Cuprocide. See page 125 for explanation of white spine and black spine cucumbers; these terms refer to the color of the over-ripe fruit.

BURPEE'S EGG PLANT

A rich, sandy, warm soil produces the best plants and yields the highest number of fruits. Seed should be started in a hotbed, or indoors in boxes or shallow pans, 8 to 9 weeks before the time to set the plants in the open ground. When seedlings are about 3 in. high, plant singly into small pots, setting the plants in the open when all danger of frost is past and the soil has become thoroughly warm. One pkt. of seed will produce about 100 plants; 1 oz. 2000 plants; $\frac{1}{4}$ lb. will produce enough plants for one acre. Days mentioned in description of each variety represent the time required until first edible fruits are ready from field setting of plants. Treat seed with Cuprocid; protect plants with Slug Shot dust.

BURPEE'S LETTUCE

Sow seed thinly in the spring as soon as the soil can be worked, in rows 1 to 1½ ft. apart, and cover with ½ in. of fine soil. Thin heading varieties to stand 1 ft. apart; loose-leaf or cutting varieties, 4 to 6 in. apart. Lettuce grows best during the cool seasons of the year, and in a rich, moist, cool

soil. For a continuous supply throughout the summer, make succession sowings two weeks apart until June. Sowings in August and September will provide lettuce during the fall. For very early lettuce, start seed indoors or in a coldframe. A pkt. of seed will sow 50 ft. of row; 1 oz. 300 ft.

Butterhead Varieties

These grow to good size and develop solid heads of good form, resembling a small cabbage in appearance. The heart is tightly folded and blanches to a light golden or buttery yellow. They will grow well in moderately warm weather, but are not so resistant to heat as the Crisp-Head varieties. The Butterhead class includes a number of well-known varieties. Excellent for succession sowings. Days given are from sowing of seed to cutting.

*White
Big Boston*

480 White Big Boston ☉

80 days. One of the most successful and largest selling of all butterhead lettuces. The large heads are tightly folded so that the solid heart blanches to a bright creamy yellow of high quality and fine texture. The outer leaves are a uniform light green entirely free from brown markings or reddish tinge. A sure header; resistant to heat and drought and adaptable to varying growing conditions. Used extensively for market plantings, both under glass and in the open in the Eastern States, and for home gardens throughout the country. Because of the public preference for an entirely green leaf lettuce, White Big Boston is replacing Big Boston to a great extent in many sections.

476 Burpee's Wayahead ☉

77 days. A favorite with both home and market gardeners, as it combines good appearance with excellent quality. Highly recommended as a spring and fall lettuce for planting in the open or in frames. It is a vigorous, healthy variety, forming plants of medium size with bright green foliage. The buttery heart is a beautiful creamy yellow. Heads well under adverse conditions, such as drought and hot weather, which likely explains its wide-spread popularity. Selections are being made in our test plots each year in order that our seed stocks may be produced from heat-resistant plants.

Crisp-Head Lettuce

These form tightly folded heads, and where the plants are grown singly at a suitable distance apart, they make very large, round, solid heads which are blanched silvery white or creamy yellow in the center of the plant.

530 Burpee's Iceberg ◎

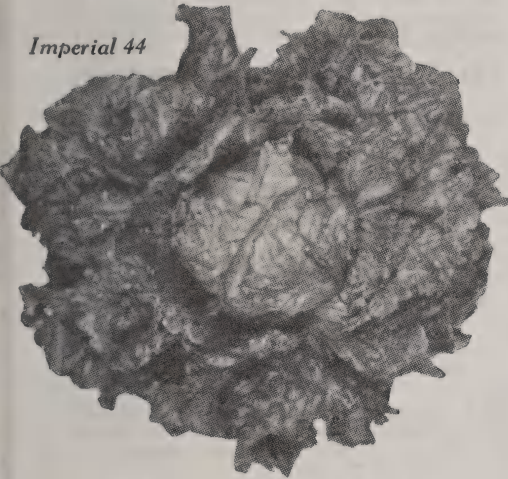

85 days. Curled, crisp plants of medium size, producing attractive green, wavy, fringed leaves having edges that are tinged with light brown. The heads are compact, not too large, and have few outer leaves and most delicious, crisp, tender hearts blanched to a silvery white even under average garden conditions. Iceberg is exceedingly vigorous and hardy, so that it will withstand quite hot weather; it is well suited to Eastern and Mid-Western growing conditions. This is the original Iceberg Lettuce introduced by Burpee in 1894. It should not be confused with the familiar "New York and Imperial" strains of lettuce, which are commonly called "Iceberg" by growers, shippers and some merchants.

Loosehead or Cutting Lettuce

Grand Rapids

These do not form solidly folded heads, but where the plants are grown singly at a suitable distance apart, they make a large, round, thick bunch of leaves which are blanched to a light green or creamy yellow in the center of the plant. The leaves are heavily curled or crumpled, attractive in appearance, and of delightful crispness and mild flavor. They are splendid to provide an extra-early supply of delicious salad, for when just a few inches tall, the thinnings may be used for the table. They are fine also for growing in the greenhouse during the winter.

485 Grand Rapids ©

45 days. Widely grown non-heading lettuce with intensely fringed and curled leaves. Used extensively for forcing in the greenhouse during winter, but is not less valuable for growing outdoors during the spring, summer, and fall. Thick sowing will give an abundance of young tender leaves very early in the season, but if the plants are spaced 12 to 18 in. apart each way, they will produce immense round masses of tender, juicy, light green leaves of good flavor.

Pkt. 10¢; oz. 20¢; ¼ lb. 60¢; ½ lb. \$1.00.

*Hale's
Best*

The most suitable soil for melons is a rich, warm, sandy loam. Sow the seed after the soil has warmed up and the weather is quite settled, putting 8 to 10 seeds in a circle in slightly raised hills and cover the seed with one inch of fine soil. The hills should be spaced 4 to 6 ft. apart each way. Thin to 2 or 3 plants to a hill after the plants are well established. A pkt. will plant 12 hills; 1 oz. to 50 hills; 3 lbs. is enough to plant an acre.

How to Grow Watermelons

Rich, rather sandy soils produce the finest crops of watermelons, but a well-drained loam, especially with a southern exposure, is also suitable. Two shovelfuls of well-decomposed manure should be mixed with the soil under each hill. Watermelons should not be planted until the weather is quite warm. The hills should be about 6 to 8 ft. apart. Place 6 to 8 seeds in a circle in each hill, and cover ½ in. deep with fine soil. Thin to 2 or 3 plants in each hill. Larger and better watermelons can be obtained if all but 2 or 3 are removed from each vine. One pkt. will plant 10 hills; 1 oz. 30 hills; 3 to 4 lbs. for one acre. In Northern States, plant Burpee's Fordhook, Cole's, or Early Northern Sweet.

589 Early Northern Sweet 78 days. Here's a watermelon that will grow where watermelons never grew before. Has matured fruit in all of our Northern States and in the Canadian Provinces. And it's good eating. The fruits are small, weighing 10 to 12 pounds, round, dark green with a suggestion of lighter green striping. The flesh is bright pink, tender, sweet flavored, and surprisingly delicious. If you had trouble in growing watermelons in the past, try this one.

Absolutely free from strings or white hearts. Stands well the excessive heat of late summer, so injurious to some varieties. A fine shipping melon, the rind being thin but hard. Introduced by Burpee.

Pkt. 10¢; oz. 25¢; ¼ lb. 75¢; ½ lb. \$1.25.

608 Burpee's Kleckley Sweets 85 days. Also known under the name of **Monte Cristo**. Melons are of handsome appearance, reaching 22 in. in length and 12 in. in diameter. They have a glossy, dark green skin and an unusually thin rind with the flesh ripening close to it. The flesh is bright scarlet and of sweet and rich flavor. Recommended for home garden use; the thin rind makes it unsatisfactory for shipping.

Pkt. 10¢; oz. 15¢; ¼ lb. 45¢; ½ lb. 80¢.

610 Florida Giant 90 days. An improved melon of the Stone Mountain type, of fancy size and quality, best adapted to the Southern States but early enough to be grown successfully in the North. They have a thick, dark green rind and the flesh is brilliant pink, crisp, juicy, free from strings and of excellent flavor. Shell is thin but very hard.

Pkt. 10¢; oz. 25¢; ¼ lb. 75¢; ½ lb. \$1.25.

611 Burpee's Halbert Honey

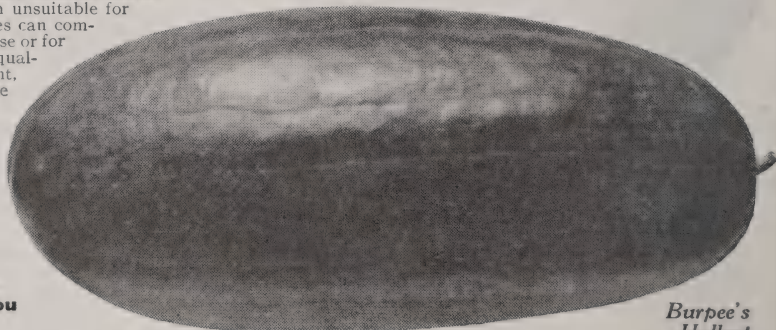

87 days. One of the sweetest of all watermelons; handsome in appearance and regular in form. Fruits are large, measuring 18 to 20 in. in length, 12 in. in diameter, and weigh up to 30 lbs. each. They are blunt at both the stem and blossom ends, and usually free from any appearance of neck. Skin color is a beautiful deep green with fine veining, and the flesh is bright crimson, crisp, and of a remarkably luscious flavor.

Rind is thin, making this melon unsuitable for distant shipping, but few varieties can compare favorably with it for home use or for nearby markets. A really high quality melon from every standpoint, which is worthy of a trial by those who are not already acquainted with it. Seeds are pure white, tipped with black. Introduced by Burpee in 1902 and still one of the leading varieties.

ONION and GARLIC SETS

For large quantities, write for special prices

It pays to plant sets of the very best quality which have nothing in common with the cheap, unreliable kinds so often offered. Burpee's sets are of the highest type. They are produced under ideal conditions from a select strain of seed, carefully screened and graded, and stored at the proper temperature until used. One lb. of onion sets will plant 100 ft. of row. Plant as early in the spring as possible.

BURPEE'S ONIONS

The soil best suited to grow a good crop of onions is one that is reasonably fertile, well drained, and well prepared. Sow seed as early in the spring as the ground can be worked, in rows 1 to 1½ ft. apart. Cover the seed lightly. If fully matured onions are wanted, thin the seedlings when 3 to 4 in. tall, to stand sufficiently far apart to develop without

touching one another. When the bulbs have reached maturity, bend down the tops to hasten ripening before the onions are harvested. A pkt. of seed will sow about 30 ft. of row; 1 oz. 200 ft. Japanese Bunching Onions, which are used as green onions or scallions, are best planted in July for harvesting the following spring.

The seed crop of onions is very short.

Utah Strain

110 days. The large, globe-shaped Spanish Onions, which are sometimes incorrectly called "Bermudas," are exceptionally mild, fine grained and sweet—excellent when cooked or for use in salads or other ways without cooking. Utah Sweet Spanish grows to very large size, is remarkably uniform, globular, light yellow skin and pure white, firm, crisp, and tasty flesh. Although no onions of this type will keep as well as American types, such as Yellow Globe Danvers, Southport, or Ebenezer, Utah Sweet Spanish will stand shipping and storage for short periods better than Prizetaker, Gibraltar or the Bermuda varieties. Onions of the Spanish type grow to the largest size when they are planted to form their bulbs during the short days of spring or fall. In northern states, seed is usually started early indoors or in a hotbed.

Pkt. 15¢; oz. 95¢; 2 ozs. \$1.80.

684 White Sweet Spanish

110 days. A true Sweet Spanish, identical with the original Sweet Spanish in every way except color, which is pure white. Large size, mild flavor, solid and crisp. Utah strain. Its attractive appearance makes it a ready seller on market stands.

Pkt. 15¢; oz. 95¢; 2 ozs. \$1.80.

671 Yellow Globe Danvers ©

Our strain is uniform and carefully selected. **Pkt. 15¢; oz. 95¢; 2 ozs. \$1.80.**

672 Ebenezer or "Japanese"

120 days. Bulbs are a flattened globe, 2½ to 3 in. or more across when well grown, yellowish brown with firm yellowish white flesh of exceptionally mild flavor. One of the best winter keepers. Grown extensively for sets because of their good keeping quality, heavy yield and the fact that a smaller percentage of the sets run to seed than other yellow-skinned onions. **Pkt. 10¢; oz. 65¢; 2 ozs. \$1.20.**

681 Prizetaker

110 days. Extra large under good growing conditions and sometimes weigh as much as 4 lbs. each, measuring 4 in. and more in diameter. Skin is thin, of a handsome golden brown tint, and the flesh is pure white, solid, crisp, juicy, and agreeably mild. A popular commercial Spanish type onion. **Pkt. 15¢; oz. 75¢; 2 ozs. \$1.40.**

711 Burpee's Gigantic Gibraltar

701 Earliest White Queen

90 days. The earliest of all. Used mostly for pickling as they are only 1½ in. in diameter when fully grown. Uniform in size and shape. Exceptionally sweet, mild flesh of the finest quality. **Pkt. 15¢; oz. 85¢; 2 ozs. \$1.60.**

697 White Portugal

105 days. Large, flat white onion with firm, fine-grained flesh of mild and pleasing flavor. Grown more extensively for sets than any other white onion. Also used for bunching or "green" onions. **Pkt. 15¢; oz. 85¢; 2 ozs. \$1.60.**

HARDY BUNCHING ONION

The plants do not form any bulbs but produce long, straight stalks that are used as scallions or green bunching onions. They are perennial and produce for many years as long as a portion of the plant is allowed to remain. Seeds sown in the spring or summer will provide mild, green scallions late in the fall or, if wintered over, very early the following spring. Plants increase in size as they grow older, and thinning to eight to twelve inches between plants is advised after the first year. In the northern part of the country protection during the winter with a mulch of straw or leaves will make the crop earlier. We cannot supply seed of White Welsh this year, the crop being a total failure. Japanese Bunching is longer with thicker shoots.

699 Japanese Long Bunching

95 days. Tender, of fine flavor, long standing, and larger than other bunching onions. Produces scallions in clusters of 3 to 5. When fully grown, they are nearly 1 in. across but retain their mild flavor. Hardy. **Pkt. 15¢; oz. 85¢; 2 ozs. \$1.60.**

The Seed Crop, this year of some vegetables, especially Onions, is very short. We suggest that you sow the seed most carefully to get the maximum results. You can depend on the usual High Burpee Quality.

Japanese Long Bunching

PARSNIPS

Guernsey
Parsnips

Sow the seed in the spring in rows 2 to 3 ft. apart and cover with $\frac{1}{2}$ in. of fine soil. Thin seedlings to stand 4 to 6 in. apart in the row. A pkt. will sow about 20 ft. of row; 1 oz. 200 ft.; 3 lbs. one acre. Grow best in loose, rich, deep soil. Roots may be stored for winter use, or some may be left in the ground all winter for use early next spring when the soil has thawed. Frost is thought to improve the flavor of parsnips.

725 Guernsey ☉

100 days. Attractive medium-long roots with a broad shoulder gradually tapering downward. The skin is light in color and quite smooth. The flesh is fine grained, tender and sweet. Considered the best quality parsnip for table use. Grow 12 in. long, 3 in. across and have practically no side roots. Pkt. 10¢; oz. 25¢; $\frac{1}{4}$ lb. 75¢; $\frac{1}{2}$ lb. \$1.25.

727 Long Smooth Hollow Crown

105 days. Longer than Guernsey but not so broad. Does best in deeply prepared soil. Fully developed roots are 15 in. long and $2\frac{3}{4}$ in. thick at the shoulder and remarkably free from side roots. Fine-grained white flesh of superior flavor. Heavy yielder. Desirable for home and market. Pkt. 10¢; oz. 25¢; $\frac{1}{4}$ lb. 75¢; $\frac{1}{2}$ lb. \$1.25.

Extra Curled Dwarf Parsley

PARSLEY

Easy to grow in the garden or in pots during winter. Does well in either sun or shade and does not require any particular kind of soil. Mostly used green, but the leaves may be dried crisp, powdered, and kept in air-tight bottles for winter use. Sow seed in early spring in rows 12 to 18 in. apart. Cover with $\frac{1}{2}$ in. of fine soil. Thin seedlings to stand 6 to 8 in. apart in the row. A pkt. will sow about 30 ft. of row; an oz. 200 ft. of row.

717 Extra Curled Dwarf ☉

70 days. Also known as **Emerald**. Has moss-like leaves of an attractive bright green color. Very finely curled. Pkt. 10¢; oz. 20¢; $\frac{1}{4}$ lb. 60¢; $\frac{1}{2}$ lb. \$1.10.

720 Paramount 70 days. Winner of the All-America Award of Merit. It produces the handsomest, finest and most uniformly curled, dark green leaves we have ever seen. Unexcelled for the home garden, market garden or for forcing. Pkt. 15¢; oz. 25¢; $\frac{1}{4}$ lb. 75¢; $\frac{1}{2}$ lb. \$1.25.

714 Plain or Single 60 days. Plain dark green leaves with rich flavor; grown extensively for soup bunches. Pkt. 10¢; oz. 20¢; $\frac{1}{4}$ lb. 50¢; $\frac{1}{2}$ lb. 90¢.

723 Parsnip-Rooted or Hamburg

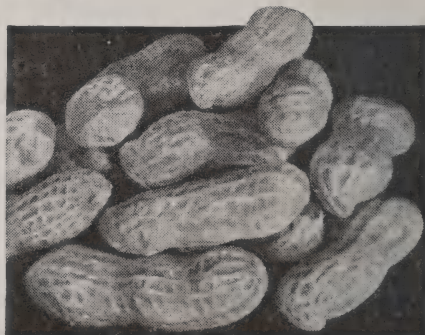

90 days. Has plain leaves, which can be used just like ordinary parsley, but is also grown for the thick, fleshy roots which are used for flavoring soups, stews, etc. Pkt. 10¢; oz. 20¢; $\frac{1}{4}$ lb. 50¢; $\frac{1}{2}$ lb. 90¢.

PEANUTS

For best results select warm, light or sandy soil rich in lime. Plant in rows $2\frac{1}{2}$ to 3 ft. apart, spacing the shelled nuts 8 to 10 in. apart in the rows, or if planted in the hulls, place them 16 to 18 in. apart in the row. Cover with 2 in. of soil. Cultivate and hoe freely. In the fall, before frost, dig and hang vines under a shed or in an airy room to cure. One pkt. will sow from 15 to 25 ft. of row; 1 lb. from 100 to 200 ft. Use 35 or 40 lbs. of seed per acre according to method used in planting. Peanuts are shipped in the shell to prevent damage to the tender seeds. They can be planted either shelled or whole.

712 Jumbo Virginia ☉ 120 days. Most productive, extra large peanut of rich flavor, with 2 or 3 large kernels to the pod. The vines spread $3\frac{1}{2}$ to 4 ft. across; make valuable fodder for stock. In great demand. Pkt. (10 pods) 10¢; $\frac{1}{2}$ lb. 35¢; lb. 60¢; 2 lbs. \$1.10.

713 Spanish 110 days. The dwarf bushes grow close and are easily cultivated and gathered. The kernels are small and very sweet. Early, and a heavy bearer. Pkt. (70 pods) 10¢; $\frac{1}{2}$ lb. 35¢; lb. 60¢; 2 lbs. \$1.10.

Jumbo Virginia Peanuts

GARDEN PEAS

Every home garden can easily produce enough peas to supply the table for many weeks. For a continuous supply of this delicious vegetable, sow the early, midseason, and late varieties as early in the spring as the soil can be prepared. Both wrinkled and smooth-seeded types can be planted early. Besides sowing at the beginning of the season varieties which will mature one after another, also make succession sowings at intervals of 10 to 14 days up to about June 1. Sow again in August for a fall crop. Cover the seed 1 to 2 in. deep. Provide supports for the tall-growing varieties. Inoculation of seed with Legume Aid before planting hastens maturity and increases the yield. A pkt. of seed will sow 20 ft. of row; 1 lb. 100 ft.

Wrinkled-Seeded Early Peas

Wrinkled-seeded peas are favored by many home gardeners, as well as market growers and canners, because of their sweetness and quality. Contrary to popular belief, they can be planted as early as the smooth-seeded varieties—as soon as the soil can be prepared, but do not sow in cold, wet ground.

Mammoth Melting Sugar Pea

EDIBLE-PODDED or SUGAR PEAS

Cook like string beans

Sugar Peas possess the tenderness and fleshy podded qualities of a snap bean and the flavor and sweetness of fresh green peas. Pick pods when peas are beginning to form and cook like snap beans. When young, pods are stringless, brittle and succulent. Should pods develop too fast for use as snap or string beans, seeds may be eaten as shelled peas. Vines should be given support of string or brush for best results.

Bronze Medal Winner*

66 days. The fruits are blocky, just the right size and shape for stuffing; 3 to 3½ in. in diameter and 3½ to 3¾ in. deep, nearly round in cross section, with 3 or 4 lobes, glossy dark green turning bright red when ripe. The flesh is ⅜ in. thick, tender, crisp and always sweet. A heavy yielder for home garden or for market. **Pkt. 15¢; ½ oz. 60¢; oz. \$1.00.**

HOW TO GROW PEPPERS

Seed should be sown in a hot-bed or in a shallow box in a warm place in the house, allowing 8 to 10 weeks to produce plants large enough to set outdoors when all danger of frost is past. Days to maturity given in descriptions are from time plants are set in the garden. Peppers prefer a moderately light, well-fertilized soil. They should be set in rows 2 to 3 ft. apart, spaced 18 to 24 in. apart in the row. A pkt. of seed will produce about 100 plants; 1 oz. 1500 plants; 4 to 6 ozs. will produce enough plants for one acre. Treat seed with Cuprocide or Semesan to prevent damping off.

BURPEE'S RADISHES

*Burpee's
Red Giant*

If your garden includes some of each of the three different classes of radishes—spring, summer, and winter varieties—it will easily keep you supplied with this refreshing vegetable practically all year around. A moderately light soil produces the smoothest and best roots. Sow the seed of **spring and summer radishes** as early in the spring as the ground can be worked, in rows 12 to 18 in. apart, covering $\frac{1}{2}$ in. deep. Thin small varieties to stand 1 to $1\frac{1}{2}$ in. apart in the row; larger varieties, 3 to 4 in. apart. Make succession plantings every week until early summer, then resume one month before frost. Seed of **winter radishes** is sown from the middle of June to the middle of August. A pkt. will sow about 20 ft. of row; 1 oz. 100 ft.

Spring Varieties

910 Burpee's Red Giant ☉

The flesh is pure white and has a most delicious flavor. It grows to perfection in rich, loose, well-prepared soil. Pick Red Giant when $\frac{1}{2}$ in. in diameter; or ten days later when roots measure $1\frac{1}{2}$ in. or more—it's always crisp, sweet and tender.

Pkt. 10¢; oz. 25¢; $\frac{1}{4}$ lb. 75¢; $\frac{1}{2}$ lb. \$1.25.

Sparkler Radish

878 Burpee's Rapid Red Radish ☉

23 days. A variety everyone should plant. Small, bright red radishes of the finest quality and as round as marbles, $\frac{3}{4}$ in. in diameter, with thin, bright red skin. The flesh is pure white, crisp, and delightfully snappy. Tops are short and attractive, making it desirable for growing under glass. The quicker they are grown, the crisper their flesh and the more delectable their flavor.

Pkt. 10¢; oz. 25¢; $\frac{1}{4}$ lb. 75¢; $\frac{1}{2}$ lb. \$1.25.

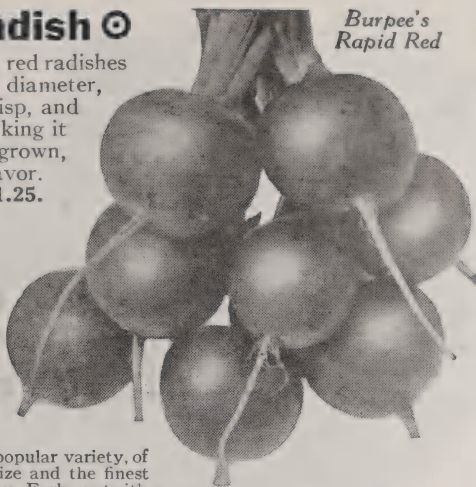

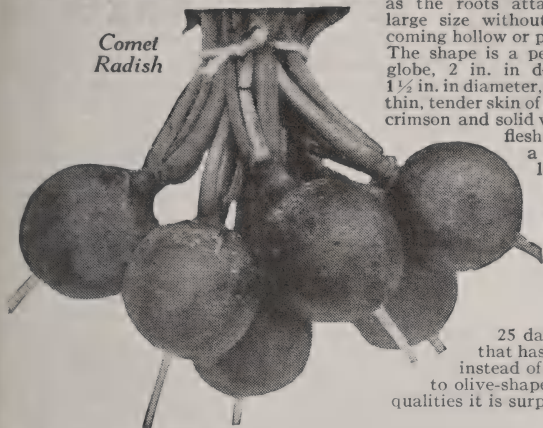

886 Crimson Giant Globe

29 days. Sweet, crisp, juicy, brittle, and a wonderful yielder. A fine giant bright red radish. This radish differs from most others as the roots attain a large size without becoming hollow or pithy. The shape is a perfect globe, 2 in. in depth, $1\frac{1}{2}$ in. in diameter, with thin, tender skin of deep crimson and solid white flesh. It is

a very popular variety, of large size and the finest quality. Early, notwithstanding its size. Sow seed thinly to permit full development of the roots, and for the biggest radishes see that the soil is moderately moist, fertile and deeply prepared.

Pkt. 10¢; oz. 25¢; $\frac{1}{4}$ lb. 75¢; $\frac{1}{2}$ lb. \$1.25.

Comet Radish

Burpee's Rapid Red

890 Comet ☉

25 days. Bred to meet the increasing demand for an early radish that has the same qualities as Vick's Scarlet Globe, but with a rounded instead of an olive-shaped root. Comet fills the bill; the roots are globe to olive-shaped, small tap-roots, bright scarlet, and for eating and keeping qualities it is surpassed by none; it will remain crisp and solid for a long time.

Pkt. 10¢; oz. 25¢; $\frac{1}{4}$ lb. 75¢; $\frac{1}{2}$ lb. \$1.25.

938 White Icicle ☉

Skin is pure white, thin and tender; flesh is icy white, crisp, juicy, perfectly mild and of a delightfully sweet flavor with just enough pungency to appeal to the appetite. Remains solid, being fully as good when 1 in. across as when only $\frac{1}{2}$ in. The roots grow 5 in. in length and are the shape of an icicle, straight and free from side roots. Splendid for either spring or fall use whether for home or market. Thorough and deep soil preparation is advisable to secure well-formed, uniform roots. Should be in every garden.

Pkt. 10¢; oz. 25¢; $\frac{1}{4}$ lb. 75¢; $\frac{1}{2}$ lb. \$1.25.

907 French Breakfast

The seed crop is very short. Pkt. 10¢; oz. 30¢; $\frac{1}{4}$ lb. 90¢; $\frac{1}{2}$ lb. \$1.50.

Sow Burpee's Guaranteed Seeds—the Best that Grow

Summer Radishes

The following varieties require more time to mature than the spring radishes so that they are becoming ready to use when the others are gone. As they grow more slowly, they endure heat better and are valuable for summer use.

928 Early Long Scarlet Short Top

30 days. Without exception the very best long, brittle red radish. Almost 6 in. in length, and matures in about 4 weeks. Our strain of this beautiful long radish is simply perfection. It is an attractive bright scarlet-red color. The tender, juicy flesh is icy white and of the finest flavor, somewhat more pungent than Icicle. Pkt. 10¢; oz. 25¢; $\frac{1}{4}$ lb. 75¢; $\frac{1}{2}$ lb. \$1.25.

953 Long White Vienna or Lady Finger

33 days. Roots 6 to 7 in. long and 1 in. in diameter at the shoulder and slightly tapering. Flesh and skin are pure white. Easily harvested, roots grow $\frac{1}{4}$ above ground. Pkt. 10¢; oz. 20¢; $\frac{1}{4}$ lb. 60¢; $\frac{1}{2}$ lb. \$1.00.

959 White Strassburg ☉

Winter Radishes

These require cool weather at the finish of their growing season. **Sow seed the middle of June, and again in July and August.** Excellent for fall and winter use. By storing roots in moist sand in the cellar, fresh, crisp radishes may be had during the early winter.

963 White Chinese or Celestial ☉

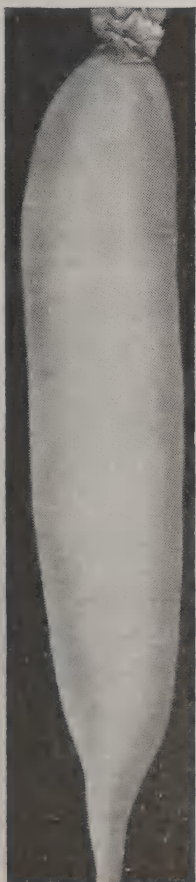

60 days. Smooth, pure white roots, 6 to 8 in. long, with a diameter of 3 in. Flesh is crisp, juicy, icy white and of mild flavor—the least pungent of all winter radishes. SPINACH

Spinach is a cool weather crop and may be sown very early in the spring. It is not injured by spring freezes. Seed may be broadcast or sown in rows 18 to 24 in. apart; cover seed with 1 in. of soil and thin plants to stand 5 or 6 in. apart in the rows. Make successive sowings until early summer; for fall use, sow from Aug. 10 to Sept. 15 and for early spring use, south of Pennsylvania, sow in Sept. and cover with a few inches of hay, leaves or litter. These plantings will give cuttings two weeks earlier than spring-sown crops. A pkt. will sow about 25 ft. of row; 1 oz. 100 ft.

999 Bloomsdale Long Standing ☉

The Hot Weather or Everlasting Spinach

70 days. This plant, when prepared for the table, so greatly resembles spinach in appearance and flavor that most people will not be aware of the difference. Makes strong plants which will resist heat and give an abundance of rich green foliage all during the summer and fall. Sends out fresh growth continuously after being cut so that a supply of "greens" may be had until frost destroys the plants. Both the young stem tips and leaves are fleshy and brittle and of the finest quality when cooked. Plants are not hardy; they attain a spread of 4 ft. when fully grown, with thick, succulent stems and small, thick, light green leaves.

1118 BURPEE'S TABLE TALK TOMATO

This is the "Nameless Tomato" of 1940, for which we paid \$500 for a name.

Note the deep globe shape and the firm, meaty interior of Table Talk Tomato.

1118 Table Talk 75 days. A new, all-purpose tomato—a new and different type of fruit on a new kind of vine. The plant is short stemmed and bushy, but with no self-topping tendency. The leaves are small and set closely together, dark green, thick and firm in texture, forming a dense mass of foliage which not only protects the fruit, but virtually hides it, especially in the center of the plant. The fruit, unusual in that it combines large size with deep globular form, averages 7 to 8½ ozs. and maintains its size well throughout the season. The shoulder is smooth, there is little or no depression at the stem end, and the scar is quite small—in other words, it is refined in spite of its size. The color is bright scarlet, uniform and attractive. Slice Burpee's Table Talk Tomato and you will marvel at the structure and the firmness of its interior.

Pkt. 15¢; ½ oz. 50¢; oz. 90¢; ¼ lb. \$3.25.

1092 Burpee's Globe

80 days. Decidedly distinct tomato of superior merit. The strong, healthy vines produce an enormous crop of uniform, medium to large sized, rich, pinkish red tomatoes. The globe-shaped fruits grow in clusters of 6 to 10; solid, meaty, and free from any core. Contains little or no acid and is a shy seeder, the seed cavities being full of solid meat. Sensational all-purpose tomato; winner of the All-America Award of Merit. Excellent for home and market garden.

How to Grow Tomatoes

Tomatoes should be in every garden. It is quite simple to grow your own plants. Sow the seed in a hotbed, or in a shallow box in the house, allowing 5 to 6 weeks to produce plants large enough for setting outdoors when weather becomes warm. Sow in rows 3 in. apart and cover with ¼ in. of soil. When plants are about 2 in. tall, transplant to stand 4 in. apart each way, or pot singly in 3 in. pots. Plant outdoors when all danger of frost is past, in rows 4 ft. apart and 3 or 4 ft. apart in the row. A pkt. will produce about 200 plants; 1 oz. 2000 plants; 2 ozs. will produce enough plants for one acre. Days to maturity are from field setting of the plants. Treat seed with Semesan or Cuprocid.

Explanation of Certified Seed

Seed listed as "Certified" is produced from crops that were inspected and certified as to truthness to type and freedom from disease by the Agricultural Department of the state in which they were grown.

1089C Marglobe, Certified ☉

Burpee's Special Fordhook Strain

73 days. This remarkable strain of Marglobe is the result of many years of selection on our Fordhook Farms. Stock seed is produced there each year for multiplication in New Jersey. In making our selections, we have stressed heavy vine growth, uniformity of vine and fruit, yield, large fruit size, shipping quality and disease resistance. Letters from satisfied users of our seeds, and trial ground reports, all give conclusive evidence of the superiority of this stock. Vines are large and vigorous, giving full protection to the crop. Fruits are globe shaped, rich red in color, with thick walls and small cells; the flavor is slightly sweet.

Pkt. 15¢; ½ oz. 35¢; oz. 60¢; ¼ lb. \$2.00.

Fruit is medium scarlet-red, semi-globular, neat at the shoulder, with extremely small stem cavity and blossom scar; average weight is 5 ozs., cracking less than Earliana. Interior is moderately open but firm.

Strong, vigorous grower, with sturdy vines which produce an enormous crop of large, handsome fruits that are meaty, rich scarlet-red in color, perfectly smooth, firm, solid and noted for their extremely long-keeping qualities. The flavor of Burpee's Matchless is deliciously sub-acid and tasty. *Burpee's
Matchless*

1114 True Giant Ponderosa◎

81 days. Grow extremely large and are full of luscious, juicy flesh. The seed cavities are remarkably small, which accounts for the solid meat. It is not unusual for the tomatoes to weigh 24 ozs. and more, though the average runs around 9 ozs. They are deep, somewhat flattened, and have a most agreeably mild flavor. People who do not care for the acid flavor of the deep red tomatoes will find in Ponderosa a very palatable and tasty fruit of a delightful mild flavor and a good deep purplish pink color. Essentially a home garden tomato; finds ready sale on roadside stands.

This beautiful lawn on Fordhook Farms was produced from Burpee's Fordhook Finest Lawn Grass Seed

Burpee's Famous Lawn Grass Seed

The best time to start your lawn, or to repair it, is during the cool weather of early spring or in early fall. The weather at these times is favorable for the development of domestic grass but unfavorable for most weeds and wild annual grasses. Why not plan now to have a luxurious lawn that will add so much to the beauty of your home? Our leaflet, No. 20, "How to Establish a Lawn," will be sent free upon your request. Sow 1 lb. of seed to 200 sq. ft.; 100 to 150 lbs. per acre.
